A mammal is a vertebrate (backboned animal) that feeds its young on the mother's milk (cláusula relativa). There are about 4,000 kinds of mammals (frase nominal), and many of them are among the most familiar of all animals. Cats and dogs are mammals. (oración) So are such farm animals as cattle, goats, hogs, and horses. And people, too, are mammals.

Two common groups of compounds that dissolve in water (cláusula relativa) are acids and bases. An acid is any substance that releases hydrogen ions when mixed with water. A strong acid (frase nominal) is one that separates completely in water to release many hydrogen ions (frase nominal). A weak acid does not separate (frase verbal) completely in water, so it releases fewer hydrogen ions. A base is a substance that separates in water (frase nominal) forming ions that react with hydrogen ions.
