Marie Curie – A pioneer in science

Marie Curie was born on November 7, 1867, in Warsaw, Poland, **when the country was under Russian control**. Her interest in science began at an early age, despite the limited opportunities available to women at the time. Determined to continue her studies, she moved to Paris to study at the Sorbonne, where she earned degrees in physics and mathematics.

In 1895, she married Pierre Curie, a physicist who shared her passion for scientific research. Together, they began studying radioactivity, a term that Marie herself coined. The couple discovered two new radioactive elements: polonium, named after her homeland, and radium. For their groundbreaking work, Marie and Pierre Curie, along with Henri Becquerel, were awarded the Nobel Prize in Physics in 1903.

After Pierre's tragic death in 1906, Marie continued her work, becoming the first woman to teach at the Sorbonne. She won her second Nobel Prize, this time in Chemistry, in 1911, for her discovery of radium and polonium and her further research on their properties. **Despite facing discrimination as a woman and a foreigner**, her contributions to science remain unparalleled.

During World War I, Curie developed mobile X-ray units to assist doctors on the battlefield, **saving countless lives**. In her later years, she focused on establishing research institutions to advance science and medicine. Marie Curie died on July 4, 1934, from aplastic anemia that was caused by prolonged exposure to radiation. Her legacy continues to inspire generations of scientists worldwide.

1. Leer rápidamente el texto completo e indicar el orden en el que aparecen las siguientes informaciones:

----- **a.** Recibió su segundo Premio Nobel.

----- **b.** Se mudó a París para estudiar.

----- **c.** Descubrió dos elementos químicos.

----- **d.** Ayudó en la Primera Guerra Mundial.

----- **e.** Se convirtió en la primera mujer en enseñar en la Sorbona.

2. Responder en español las siguientes preguntas:

a. When did Marie Curie move to Paris, and why?

b. What did she discover with her husband?

c. How did she contribute during World War I?

d. What challenges did she face as a scientist?

e. What caused her death?

3. Marcar tres (3) oraciones subordinadas con distinto pronombre relativo en el texto. Indicar el principio y el fin con paréntesis y expresarlas en español:

.....

.....

.....

4. En el texto aparecen los siguientes verbos. Indicar con una cruz (x) si se encuentran en voz activa o pasiva y proponer una versión en español:

Frase Verbal	Línea	Voz Activa	Voz Pasiva	Traducción
was born	1			
earned	5			
were awarded	11			
remain	16			
was caused	20			

5. Buscar las frases subrayadas y expresarlas en español de acuerdo al contexto en el que aparecen:

- a.
- b.
- c.
