

PRÁCTICA INTEGRADA (respuestas)

1. In hot climates such as Mexico, foods tend to be spicy **because** the spices actually have a cooling **effect**. The **heat-causing** chemical in chili peppers raises your heart rate and also **causes** you to perspire, especially on your head and face. As this moisture evaporates, heat is pulled away from the body. **As a result**, you feel cooler. This **reaction** explains why so many dishes in tropical areas are flavored with hot sauce. It also explains **why** people who live in these areas become fond of eating whole hot peppers straight from the jar. (Fuente: Joy E. Zacharia, "Cool Down With Hot Sauce," *Southern Living*, August 2004, p. 83.)

Patrón de organización: **Causa-efecto**

Tema: efecto refrescante de la comida picante / comida picante / condimentos

Idea principal: En los lugares cálidos, como México, la comida es picante porque las especias tienen un efecto refrescante.

2. Oxidation **is** a chemical reaction that occurs when a material combines with oxygen and electrons (negatively-charged particles) are removed. Slow oxidation is occurring, for example, when metals such as iron and steel form rust. The tarnishing of silverware is **another example** of slow oxidation. Burning with fire is a faster oxidation reaction. The cells of the human body, too, convert food to energy through the process of oxidation. Bleaching, the removal of stains or color from fabric, is yet **another process** that involves oxidation. Oxidation **is** also an essential reaction within the batteries we use to power tools, vehicles, and toys

Patrón de organización: **Definición** / **Listado de ideas relacionadas/ejemplos**

Tema: oxidación

Idea principal: La oxidación es una reacción química que ocurre cuando un material se combina con oxígeno y se liberan los electrones.

3. **First of all**, we must prevent environmental damage by reducing the amount of trash we discard. According to the EPA, we can consume and throw away less by buying long-lasting goods. We should **also** buy products with the least toxins and the least wasteful packaging. **Secondly**, we must reuse things as much as possible. Instead of throwing things out, for example, we can repair them, sell them, or donate them to charity. We can **also** use durable containers rather than paper or foam ones, cloth towels instead of paper towels, and refillable pens. **Finally**, says the EPA, we must recycle and buy recycled products. Recycling turns materials like glass, metal, plastics, and paper into valuable resources and keeps them from becoming harmful waste.

Patrón de organización: **Listado de ideas relacionadas/ejemplos**

Tema: acciones para evitar el daño ambiental / las 3 R (reducir, reutilizar y reciclar)

Idea principal: Si tomamos ciertas medidas como reducir, reutilizar y reciclar, podremos proteger el medioambiente. / Siguiendo la regla de las 3 R (reducir, reutilizar y reciclar) podremos evitar el daño ambiental.

4. Since we are talking about sleep, did you know there are a lot of myths about sleep? **For example**, you should sleep seven or eight hours of sleep, not five or six. Some people say they need less sleep, but this is untrue and there are **consequences**. If you sleep too little, you will work less effectively. Not enough sleep **also** damages your heart and immune system. **In addition**, if you drive with six hours of sleep or less, it's almost the same as driving drunk. You will have worse **reaction** times and more accidents. **Lastly**, if you usually sleep too little during the week but then sleep a lot on the weekend, this pattern is also harmful. Irregular sleep patterns **can cause** stress.

Patrón de organización 2: **Causa-efecto**

Tema: mitos sobre el sueño / (cantidad de) horas de sueño / efectos de no dormir lo suficiente

Idea principal: Existen muchos mitos acerca del sueño. / Se generan muchos mitos con respecto al sueño. / Para estar sanos, deberíamos dormir entre 7 y 8 horas diarias. / No dormir lo suficiente trae consecuencias para la salud.

5. Volcanic eruptions are extremely dangerous, as flowing lava burns and covers anything in its path. Explosive eruptions **are responsible for** the destruction of many cities throughout history, such as the island city of Pompeii. Fortunately, the largest volcanoes are under the oceans, in long undersea mountain ranges known as mid-ocean ridges. **Due to** the danger, scientists are constantly seeking ways to predict eruptions, with limited success.

Patrón de organización: **Causa-efecto**

Tema: erupciones volcánicas

Idea principal: Las erupciones volcánicas son muy peligrosas y destructivas.

6. When you get a puppy, **you have to** teach it how to behave. **You have to** make sure that the puppy is housebroken so that it does not go to the bathroom inside the house. **You have to** teach the puppy not to jump up on your guests or chew on your shoes. **You have to** train the puppy to walk on a leash. This is a lot of work. **On the other hand**, when you get an adult dog, there is a good chance that it will already know how to do all of the previously mentioned things. **Many adult dogs** have already been housebroken. **Many adult dogs** will not jump on or chew things that you do not want them to jump on or chew. **Many adult dogs** will be able to walk on a leash without pulling you to the other side of the street.
