

UNIDAD 4: Voz pasiva (respuestas)

1. ¿Cada par de oraciones tiene el mismo significado, es decir, expresa la misma idea?
Sí, tienen el mismo significado.
2. ¿Cuál es el sujeto de la primera oración de cada par?
 - 1) a. *They*
 - 2) a. *They*
 - 3) a. *Most shops*
 - 4) a. *Alexander Graham Bell*
3. ¿Cuál es el sujeto de la segunda oración?
 - 1) b. *The offices*
 - 2) b. *An old letter*
 - 3) b. *Credit cards*
 - 4) b. *The telephone*
4. ¿En qué tiempo están conjugados los verbos en cada par de oraciones?
 - 1 y 3 = *Presente Simple*
 - 2 y 4 = *Pasado Simple*

Texto 1

THE WATER CYCLE

The earth's supply of water is stable and **is used** over and over again. Most of the water (98 percent) is present in oceans, lakes, and streams. Of the remaining 2 percent, some **is frozen** in polar ice and glaciers, some **is found** in the soil, some is in the atmosphere as water vapour, and some is in the bodies of living organisms.

Sunshine evaporates water from the oceans, lakes, and streams, from the moist soil surfaces, and from the bodies of living organisms, drawing the water back up into the atmosphere, from which it falls again as rain. This constant movement of water from the earth into the atmosphere and back again **is known** as the water cycle. The water cycle **is driven** by solar energy.

Some of the water that falls on the land percolates down through the soil until it reaches a zone of saturation. In the zone of saturation, all holes and cracks in the rock **are filled** with water. Below the zone of saturation is solid rock through which the water cannot penetrate. The upper surface of this zone of saturation **is known** as the water table.

- 1) El 98% del agua está presente en océanos, lagos y arroyos, ¿y el resto?
Parte está congelada en el hielo polar y los glaciares, parte se encuentra en el suelo, parte está en la atmósfera como vapor de agua y parte, en el cuerpo de los organismos vivos.
- 2) ¿A qué se llama ciclo del agua?
Al movimiento constante de agua desde la tierra a la atmósfera y de vuelta a la tierra.
- 3) ¿Qué impulsa el ciclo del agua?
La energía solar.
- 4) ¿Qué sucede en una zona de saturación?
Todos los agujeros y las grietas de la roca se llenan de agua.
- 5) ¿Cómo se denomina la superficie superior de la zona de saturación?
Nivel freático / Napa freática.

Actividad 1

1. The university **is visited** by hundreds of foreign students.
2. The building **will be inaugurated** next week.
3. There are an estimated 500,000 earthquakes around the world each year. (Voz activa; Presente simple: Hay)
4. Messiah **was composed** in 1741 by Händel.
5. Renewable resources **can be** easily **replaced** or **recovered**.
6. Scientists are developing a new vaccine. (Voz activa; Presente continuo: están desarrollando)
7. Original paintings **are sold** for thousands of dollars.
8. The lack of sleep can affect growth and the immune system. (Voz activa; verbo modal: puede afectar)
9. There are eight different blood types [which **are described** using the letters A, B, and O]. (Voz activa; Presente simple: Hay. ACLARACIÓN: La respuesta correcta es “voz activa” porque la oración completa, cuyo verbo principal es “hay”, “existen”, está en voz activa; pero la cláusula subordinada está en voz pasiva: son descriptos, se describen)
10. The new members of the organization **were not invited** to the conference.

Texto 2

Verbo	Voz activa	Voz pasiva	Tiempo verbal	Traducción al español
were invented		X	Pasado Simple	fueron inventadas
had been done		X	Pasado Perfecto	habían sido hechos
were done		X	Pasado Simple	eran hechos
were driven		X	Pasado Simple	eran impulsados
was done		X	Pasado Simple	era realizado
were built		X	Pasado Simple	fueron construidas
left	X		Pasado Simple	dejaban/abandonaban
are found		X	Presente Simple	se encuentran
live	X		Presente Simple	viven
is	X		Presente Simple	es

Actividad 2

MODERN MANUFACTURING PROCESSES

A) Electroforming

Electroforming is a way of making very accurate metal parts. It is similar to electroplating in that a metal coating **is deposited** on a special form in an electrolytic solution. The difference is that the coating is thicker so that the form **can be removed** to leave a solid part. This process allows manufacturers to “grow” components with precise dimensions. It makes it possible to produce extremely accurate copies of masters. For this reason, electroforming **is used** in the manufacture of CDs.

B) Water jet abrasive cutting

Water jet abrasive cutting uses a high pressure jet of water combined with an abrasive substance to cut through materials. The advantages of this form of cutting are that the jet **can be adjusted** and the kind of abrasive **(can be) changed (*)** so that almost any kind of material **can be cut**. In addition, the material **can be cut** without changing its properties in any way. With heat, there is always some damage to the areas nearest the cut. This form of cutting has many applications. It **can be used** to cut metals, composites, and even thick concrete. At the other end of the scale, fine water jets, without added abrasives, **are used** in surgery.

(*) **can be** no está en el texto, pero se puede reponer para visualizar más claramente la presencia del participio pasado **changed**. La traducción del fragmento sería “el chorro puede ser ajustado y el tipo de abrasivo (puede ser) cambiado”.

C) Hydroforming

Hydroforming is a way of shaping materials such as aluminum or ultralight steel. The metal **is pushed** into shape using fluid pressure. For example, to produce components for car bodies, steel tubes **are placed** inside a mould and high pressure **(is) applied** (*) in the tube which pushes the metal into the exact shape required. Hydroforming a component in this way means that several different operations such as stamping and welding **are** no longer **required**. Hydroforming **is used** where there is demand for lower weight with high strength. It **is used** in the manufacture of top-of-the-range sports cars and motorbikes, such as Harley Davidsons. It **is** also **used** in the aerospace industry to produce panels for aircraft.

(*) **is** no está en el texto, pero se puede reponer para visualizar más claramente la presencia del participio pasado **applied**. La traducción del fragmento sería “tubos de acero son colocados dentro de un molde y alta presión es aplicada” o “se colocan tubos de acero dentro de un molde y se aplica alta presión”
