FUNDING FOR SCIENTIFIC RESEARCH

Research funding is a term which covers any funding for scientific research in the areas of both "hard" science and technology and social science. The term often connotes funding obtained through a competitive process, in which potential research projects **are evaluated** and only the most promising receive funding.

Scientific research requires substantial funding, especially when it involves the use of expensive equipment. The funding often comes directly from governments. In the U.S., for example, it is the federal government that sponsors most national defense and space exploration projects.

Funding for science can also come from science foundations. In 1950, the U.S. Congress passed an act that established the National Science Foundation. This independent federal agency develops a national science policy and supports scientific research and education. Two other well-known foundations that are involved in disease research are the American Cancer Society and the National Heart Association.

Research **is** also **conducted** and supported by private-sector industries that employ scientists – especially from the applied sciences- who work on the development of industrial or commercial processes and products. The phrase *research and development* (R&D) has a special commercial significance apart from its conventional coupling of scientific research and technological development. In the last year, the world's three largest spenders of R&D **have been** the United States (US\$330 billion), China (US\$136 billion) and Japan (US\$130 billion).

Scientific research is also supported by universities through professorships. Most professors **do not** just **give** classes but also conduct scientific research. Indeed, what many professors **are looking for** is the opportunity to work at a university where they **can continue** their own research. These are the professors whose students have the chance to observe real research at firsthand. Most universities specialize in certain fields and they are frequently judged on the achievements of their research professors. Scientists whose research findings are published and talked about in scientific circles bring prestige to the institution where they work.

1. Leer rápidamente el texto completo e **indicar el orden** en el que aparecen las siguientes informaciones:

- a. *Cómo se financia la investigación científica desde el sector público.*
- b. *La importancia de la investigación científica en la universidad.*
- c. *Ejemplos de fundaciones que promueven la investigación científica en Estados Unidos.*
- d. *Qué son los fondos para la investigación científica y cómo se obtienen.*
- e. *Fondos destinados a la investigación y el desarrollo en el sector privado.*

2. **Responder en español las siguientes preguntas:**

- a. How is funding for scientific research obtained?
- b. What type of research is supported by foundations in the United States?
- c. What type of research is funded by industries?
- d. Why is scientific research supported by universities?

3. Marque **tres (3) oraciones subordinadas con distinto pronombre relativo** en el texto. Indique el principio y el fin con paréntesis y a continuación, **reformúlelas en español:**

- 1.
- 2.
- 3.

4. En el texto aparecen las siguientes **frases verbales**. Indique con una cruz (x) si se encuentran en **voz activa o pasiva** y proponga una versión en español:

Frase Verbal	Párr.	Voz Activa	Voz Pasiva	Traducción
Are evaluated	1			
Is conducted	4			
Have been	4			
Do not give	5			
Are looking for	5			
Can continue	5			

5. Buscar las **frases subrayadas** y expresarlas **en español** de acuerdo al contexto en el que aparecen:

a.

b.

c.

d.

e.
