- 4) a system of rules
- 5) Law governs a wide variety of social activities.
- 6) of human rights
- 7) the decisions of government agencies
- 8) There are millions of different types of cells.
- 9) that coordinates protein synthesis
- 10) Another important cellular organelle is the mitochondrion.
- 11) is called
- 12) can be represented
- 13) construction of models
- 14) Polyethylene is one of the simplest and most inexpensive polymers.
- 15) with significant numbers of short branches

A mammal is a vertebrate (backboned animal) **that feeds its young on the mother's milk**. There are **about 4,000 kinds of mammals**, and many of them are among the most familiar of all animals. **Cats and dogs are mammals**. So are such farm animals as cattle, goats, hogs, and horses. And people, too, are mammals.

Two common groups of compounds **that dissolve in water** are acids and bases. An acid is any substance that releases hydrogen ions when mixed with water. **A strong acid** is one that separates completely in water to release **many hydrogen ions**. A weak acid **does not separate** completely in water, so it releases fewer hydrogen ions. A base is **a substance that separates in water** forming ions that react with hydrogen ions.
