/*  
* ESTRATEGIAS Y TIPS:  
* 1. Dibujar diagrama de clases para comprender la herencia.  
* 2. Pensar en ejemplos concretos si surge alguna duda.  
* 3. Comenzar identificando los errores de COMPILACIÓN.  
* 4. Seguir identificando los errores de EJECUCIÓN.  
* 5. Seguir los numeritos!!!!  
* 6. Compilar y ejecutar mentalmente, haciendo una traza manual de los saltos y llamadas :)
