

CURSO DE LECTURA COMPRENSIVA DE TEXTOS EN INGLÉS

NIVEL II

Segundo Cuatrimestre 2025

Profesoras: Mg. Mariela K. Starc – Trad. Micaela C. Gómez

Programa de Idioma Inglés – Universidad Nacional del Sur

REVISIÓN: gramática + estrategias

En estas primeras clases, vamos a repasar los contenidos principales de **gramática y estrategias de lectura** desarrollados en el nivel anterior del curso:

- Conectores
- Prefijos y sufijos
- Comparativos y superlativos
- Referencia
- Frases nominales
- Predicción
- *Skimming / scanning*
- Inferencia de vocabulario

Texto 1

THE BUILDING BLOCKS OF NUTRITION

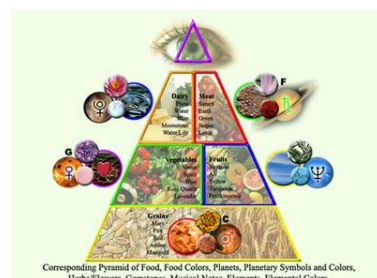

As human beings with different cultures, habits, and tastes, each of us eats differently from our friends and neighbors and much differently from people in other parts of the world. Some of **us** eat rice every day; others have never eaten rice. Some of us love to eat meat, or fish and other seafood; others never, or almost never, eat meat or fish and live almost entirely on vegetables. Each of us has a favorite food, and each country has typical and common dishes and recipes.

Nutrition is the word for what **we** take into our bodies so that we will grow and stay healthy. Whether our food is from animals (beef, pork, mutton), from the sea (fish, shrimp, lobster, shellfish, crab), or from the earth (wheat, corn, green vegetables, fruits), all food is made up of several basic elements or building blocks. Our bodies need basically four types of nutrients from food: proteins, carbohydrates, fats, and vitamins and minerals. Proteins help the body grow and repair **itself** when it is damaged. **They** are found in many kinds of food, but especially in eggs, milk, meat, and fish, although many vegetable foods also contain high amounts of protein.

Carbohydrates give us energy. Athletes who are going to be active for a long time often eat large amounts of carbohydrates before competing. The most beneficial carbohydrates come from vegetable sources such as wheat, corn and beans. Sugars are also a form of carbohydrates, but the body uses **them** quickly and without much benefit.

Fats also provide energy to the body after the energy from carbohydrates is used up. Fats come from both animal and vegetable sources.

Vitamins and minerals are another group of food elements. There are many vitamins and minerals (vitamins A, B, C, D and E, and the minerals iron, zinc, iodine, and others), and scientists often disagree about how much of **each** is necessary. But we do know that the best way to get the vitamins and minerals we need is to eat the right amounts of the right kinds of food. Eating right by eating the right amounts of the right combination of food types is the best way to make sure that we get all of the nutrition we need.

Leé el texto *The Building Blocks of Nutrition* y resolvé las siguientes actividades:

1. Respondé las preguntas:

- a) ¿Cuáles son los cuatro tipos de nutrientes que necesita nuestro cuerpo?
- b) ¿Qué nutriente contienen los huevos y la carne?
- c) ¿Con qué contribuyen los hidratos de carbono a la nutrición?
- d) ¿Por qué el azúcar no es una buena forma de hidratos de carbono?
- e) ¿En qué circunstancias el cuerpo usa las grasas como fuente de energía?
- f) ¿Cuál es la mejor forma de obtener vitaminas y minerales?

2. Encontrá ejemplos de conectores que cumplan las siguientes funciones.

Conector	Función
	Introducir ejemplo
	Agregar información
	Contraste (x2)

3. Buscá los antecedentes de los pronombres resaltados. ¿Qué tipo de referencia indican?

4. a) Clasificá las palabras subrayadas según la función del sufijo que contienen.

Palabra	Significado / función del sufijo
	Formar sustantivo: persona que tiene una creencia/profesión
	Formar sustantivos a partir de verbos
	Formar adjetivos
	Formar adverbios a partir de adjetivos

b) Identificá el prefijo de la palabra disagree. ¿Qué significa el prefijo?

5. Expresá el título del texto en español.

Video: What's new about the Nutrition Facts Label: <https://bit.ly/2Y0Xv5c>

Texto 2

FOSSIL FUELS

Conventional power stations burn coal, oil or gas to produce electricity. Coal, oil and gas are called fossil fuels because they form over millions of years through the decay, burial and compaction of rotting vegetation on land (coal), and marine organisms on the sea floor (oil and gas). Burning fossil fuels in this way releases **large quantities of sulphur dioxide and nitrogen oxides** which can cause acid rain.

Coal is a solid fuel formed over millions of years by the decay of land vegetation. Over time, successive layers become buried, compacted and heated, a process through which the deposits are turned into coal. Coal is widely used in the generation of electricity in power stations because it is **a highly concentrated energy source**. However, it is not **a particularly "clean" fuel**, releasing more acidic pollution than either oil or gas. Coal was the first fossil fuel to be exploited on a large scale during the 19th century with the beginning of the Industrial Revolution. Before the commercial introduction of electricity, coal was primarily used in industrial boilers to create steam energy to power machinery.

Oil is formed from the remains of marine microorganisms (microscopic animals and plants) deposited on the sea floor. As they accumulate over millions of years they gradually infiltrate **the microscopic cavities of the sea floor sediment and rock** where they decay. The resulting oil remains trapped in these spaces, forming oil reserves which can be extracted through **large drilling platforms**. The use of oil increased significantly after the Second World War. In the early 1970s, approximately 40% of global fossil fuel use came from oil, but during the 1990s this figure has decreased. **Improved energy efficiency** has caused oil consumption to decline in many developed, industrialised countries, as well as shifts to other fuels such as natural gas and nuclear energy. Decreasing use of oil is also resulting from **tougher environmental restrictions** concerning its use in some regions.

Natural gas is formed in the same way as oil, from the remains of marine microorganisms. From the mid-1960s, up until the present day, there has been a dramatic increase in **the amount of proven reserves of natural gas**. Consequently, natural gas has become **the fastest-growing energy resource**. The present global use of natural gas is approximately 20% of all fossil fuel use, and this figure is predicted to rise in the future. Natural gas provides an alternative to oil or coal in the provision of energy, and in terms of acidic pollution it is a cleaner fuel. Some estimates indicate the reserves of natural gas may be available for up to 400 years.

Leé el texto *Fossil Fuels* y resolvé las siguientes actividades:

Predicción

1. A partir del título y la imagen ilustrativa, ¿podés anticipar de qué trata el texto?
2. ¿Qué información esperás encontrar?

Skimming

3. Aplicando la técnica de *skimming*, comprobá si tus predicciones fueron acertadas.

Para hacer *skimming*, debemos leer solo las partes del texto que nos permitan obtener una idea global del texto: título, primer párrafo, primera línea de cada párrafo y último párrafo.

Scanning

4. Encontrá las respuestas a las siguientes preguntas aplicando la técnica de *scanning*.

Para hacer *scanning*, debemos leer muy rápidamente y con una pregunta en mente para hallar información específica.

- a) ¿Qué combustibles fósiles se mencionan en el texto?
- b) ¿Cuándo comenzó a explotarse el carbón a gran escala?
- c) ¿Qué porcentaje de uso global de combustibles fósiles correspondía al petróleo a principios de la década del 70?
- d) ¿Qué duración indican algunas estimaciones para las reservas de gas natural?

Inferencia de vocabulario

5. ¿Podés inferir el significado de las palabras resaltadas en estos fragmentos?

Para inferir el significado de una palabra desconocida podemos establecer si es una palabra transparente (parecida a una palabra del español), identificar la categoría de la palabra (sustantivo, adjetivo, verbo, etc.), analizar cómo está formada (prefijos / sufijos) y buscar claves en el contexto (palabras que la rodean).

Coal, oil and gas are called fossil fuels because they form over millions of years through the **decay**, **burial** and compaction of rotting vegetation on land (coal), and marine organisms on the sea floor (oil and gas).

in this way **releases** large quantities of sulphur dioxide and nitrogen oxides which can cause acid rain.

Frases nominales

6. Colocá los componentes de cada frase nominal en el casillero correcto. Luego expresá las frases en español.

1. Conventional power stations
2. large quantities of sulphur dioxide and nitrogen oxides
3. a highly concentrated energy source
4. a particularly "clean" fuel
5. the microscopic cavities of the sea floor sediment and rock
6. large drilling platforms
7. Improved energy efficiency
8. tougher environmental restrictions
9. the amount of proven reserves of natural gas
10. the fastest-growing energy resource

What are fossil fuels? <http://bit.ly/4oG6u6R>

UNIDAD 1: Cláusulas relativas

Las **cláusulas relativas** son cláusulas subordinadas que funcionan como un **adjetivo** (califican a un sustantivo).

Texto 1

Galileo Galilei

Galileo Galilei was born in Pisa on February 15, 1564. He was the oldest son of Vincenzo Galilei, **who was a musician**. In the 1570's, his family moved to Florence, Italy, **where he attended a monastery school**. Later, he attended the University of Pisa. He planned to study medicine but then decided to pursue mathematics and philosophy, especially the philosophy of the Greek philosopher Aristotle.

He left the university before he earned a degree. For several years, he gave private lessons in mathematics. During this time, he invented a balance for weighing small quantities. He also began to study motion **which he continued to do for many years**.

In 1588, he did not win a position at the University of Bologna. However, later that year, he was asked to deliver a paper at the Florentine Academy on the arrangement of the world in Dante's *Inferno*. Because of his work on gravity, he was noticed by Guidobaldo del Monte **who helped him obtain a position in mathematics at the University of Pisa**.

At the Leaning Tower of Pisa, Galileo conducted the famous experiment **where he dropped two objects of different weights from the top of the tower**. He wanted to prove that the speed of an object is not related to its weight. This experiment refuted (termed wrong) the theories of the Greek Aristotle **whom Galileo had followed before**. Many scientists attacked his new theory and his move away from the theories of Aristotle, and he was dismissed from his position at the University of Pisa. [...]

Leé el texto y busca las respuestas a las siguientes preguntas:

1. ¿Cuál era la ocupación del padre de Galileo?
2. ¿En qué ciudad estaba la escuela a la que asistió Galileo?
3. ¿Qué estudió durante muchos años?
4. ¿Qué ayuda recibió de Guidobaldo del Monte?
5. ¿En qué consistió el experimento de la torre inclinada de Pisa?
6. ¿A quién había seguido Galileo antes?

Cláusulas relativas

Los fragmentos resaltados en el texto 1 son cláusulas relativas.

Una **cláusula relativa** describe o identifica a un sustantivo, por eso se la conoce también como **cláusula subordinada adjetiva**.

Por ejemplo:

He was the oldest son of Vincenzo Galilei, who was a musician.

Esta es una **oración compleja** formada por una **cláusula principal** (independiente) y una **cláusula subordinada** (dependiente).

[He was the oldest son of Vincenzo Galilei], [who was a musician.]

PRINCIPAL

SUBORDINADA

La cláusula relativa *who was a musician* describe o da información adicional sobre el sustantivo propio *Vincenzo Galilei*.

Las cláusulas relativas son introducidas por **pronombres o adverbios relativos**.

PRONOMBRES RELATIVOS

WHO	personas (<i>que, quien</i>)	The man who lives next door is French.
WHOM	personas (<i>a quien, al cual</i>)	The woman whom I met this morning was my teacher.
WHICH	objetos, animales, oraciones (<i>que, cual</i>)	The car which I like is expensive. He arrived late, which surprised me.
THAT	objetos o personas (<i>que</i>)	The book that you lent me is very good. The girl that I saw yesterday studies Math.
WHOSE	personas, objetos, animales (<i>cuyo, cuya, cuyos, cuyas</i>)	The man whose daughter won the tournament is a tennis coach. The dog whose owner lives next door is a Cocker spaniel.

ADVERBIOS RELATIVOS

WHERE	lugar (<i>donde</i>)	The house where I live was built 50 years ago.
WHEN	tiempo (<i>cuando</i>)	I'll never forget the day when we first met.
WHY	razón (<i>por el/la cual</i>)	This is the reason why I arrived late.

Las cláusulas relativas pueden ser:

> **ESPECIFICATIVAS (defining relative clauses)**

Indican a quién o qué se refiere el hablante

- I spoke to the man who painted the house.
- Chocoholics are people who find chocolate very difficult to resist.
- The film is about a man whose wife disappears.
- A library is a building where you can borrow books.

> **EXPLICATIVAS (non-defining relative clauses)**

Dan información adicional, van entre comas.

- My sister, who lives in Madrid, is an architect.
- Leonardo, whose most well-known painting is the Mona Lisa, was also an inventor.
- In 1908 Ford developed his Model T car, which sold for \$500.
- We'll visit Rome in June, when the weather is nice.

Actividad

Marcá las cláusulas relativas entre paréntesis:

- a) ¿Están introducidas por un pronombre o un adverbio relativo?
- b) ¿Son especificativas o explicativas?

1. Gravity is a force which pulls objects together.
2. Elephants, which are the largest land mammals, live in herds of 10 or more adults.
3. Nomads are farmers who wander from place to place in the desert.
4. The nutrients that are found in the food are usually needed for good health.
5. Hormones act as chemical messengers that carry instructions to other cells to change their activity.
6. Deserts are areas of land where there is almost no rainfall.
7. Plasma, which is mostly water, is an important component of blood.
8. Proteins supply energy and amino acids, which build and repair the cells in the body.
9. The place where two bones come together is called a joint.
10. There are several organs that contain cells that secrete hormones.

Texto 2

OZONE HOLE

Ozone depletion occurs when the natural balance between the production and destruction of stratospheric ozone is inclined in favour of destruction. Although natural phenomena can cause temporary ozone losses, chlorine and bromine released from man-made synthetic compounds such as CFCs are now accepted as the main cause of this depletion.

A common misconception is that there is an ozone hole above us in the sky **which** is admitting harmful ultraviolet (UV) radiation from the Sun. Ozone depletion, in fact, is occurring all over the world due to man-made pollution, at levels within the stratosphere, 19 to 30 km above the Earth's surface. However, in certain parts of the world, ozone depletion is particularly severe, and it is in the regions **where** the term “ozone hole” strictly applies.

Every September and October during the Southern Hemisphere springtime, significant ozone destruction is observed in the stratosphere above Antarctica, with losses of up to 60%. Levels of ozone are measured in Dobson Units (D.U.). The average amount of stratospheric ozone throughout the world is about 300 D.U. Ozone concentrations over Antarctica during the period of greatest depletion usually fall well below 200 D.U. When ozone concentrations are plotted on a map, the presence of a large ozone hole over the continent is striking.

The formation of the ozone hole over Antarctica is a consequence of the special atmospheric conditions **which** occur there, in particular the very low stratospheric temperatures (below -80 °C), the isolated wind patterns and the presence of continuous sunlight after the September equinox. Every summer (December to January) the hole repairs itself when stratospheric temperatures rise and the air above Antarctica mixes with the rest of the world's atmosphere. This cycle of ozone hole formation and reparation is repeated every year. The ozone hole over Antarctica has been forming every year since the early 1970s. In recent years the hole has become both larger and deeper, in the sense that more and more ozone is being destroyed.

Every March to April during the Northern Hemisphere springtime a similar, but less pronounced ozone hole forms above the Arctic. The natural circulation of wind – the polar vortex – **which** isolates Antarctica from the rest of the world during the Southern Hemisphere winter and early spring, contributing to the ozone loss there, is much less developed in the Northern Hemisphere above the Arctic. In addition, stratospheric temperatures there are not as low as in the Antarctic, and consequently the loss of ozone is not as severe. However, the formation of even a moderate ozone hole above the Arctic region can give cause for considerable concern due to the greater populations in the higher latitudes of the Northern Hemisphere.

1. Expresá en español las frases nominales subrayadas en el texto:

- a) man-made synthetic compounds
- b) harmful ultraviolet radiation from the Sun
- c) the Earth's surface
- d) Southern hemisphere springtime
- e) a large ozone hole over the continent
- f) the special atmospheric conditions
- g) the isolated wind patterns
- h) the presence of continuous sunlight
- i) this cycle of ozone hole formation and reparation
- j) the greater populations in the higher latitudes of the Northern Hemisphere

2. Respondé las siguientes preguntas:

- 1) ¿En qué circunstancias ocurre la pérdida de ozono?
- 2) ¿Cuál es en la actualidad la principal causa de esta pérdida?
- 3) ¿En qué capa de la atmósfera se da este fenómeno?
- 4) ¿Cuándo se da la mayor pérdida en la atmósfera?
- 5) ¿En qué se miden los niveles de ozono?
- 6) ¿Qué representa la cifra 300 D.U.?
- 7) ¿A qué se debe la formación del agujero de ozono en la Antártida?
- 8) ¿Cómo y cuándo se repara el agujero de ozono en la Antártida?
- 9) ¿Cuándo se inició este fenómeno del agujero de ozono?
- 10) ¿Por qué es igualmente preocupante la formación de un agujero de ozono moderado en el Ártico?

3. Observá los pronombres/adverbios relativos en negrita:

- a) **marcá las cláusulas relativas que introducen.**
- b) **expresá las cláusulas en español.**

Texto 3

The Right Job for Your Personality

Choosing a career is an important life decision, yet many people settle on one based on the opinions of friends and family. It's very difficult to find something you really enjoy doing, but scientists have devised tests to help people come closer to finding their dream job.

One of the most widely-used tests is the Holland Code. Psychologist John Holland worked for more than 50 years to develop his theories about personality and career choice. He created a set of six personality types to help people understand what careers might be best for them. Dr. Holland believed people work best in environments that match their personalities, and the key to finding a satisfying career is to match your fundamental interests with an occupation.

Take a look at the six personality types below. Most people are a combination of two or three types.

A) Realistic

Realistic people like to work with things that they can see or touch. They are inclined to solve problems by doing them, rather than thinking or talking about them. They generally like to work outside and are good with tools, machines, plants, and animals.

B) Investigative

People who belong to this personality type value ideas and are strong at tasks that allow them to investigate facts and figure out complex problems. They are better at individual work like research and study, rather than leading groups of people or working in teams.

C) Artistic

Artists are creative people who don't work well with structure and rules, and thrive instead in environments that allow communication and a free flow of ideas. They enjoy tasks that allow them to express themselves and mix with people.

D) Social

Social personalities love to work with people. They get the most satisfaction out of teaching and helping others, and are driven to serve the community as opposed to making money.

E) Enterprising

Many great leaders and business people have enterprising personalities. These are persuasive people who are good at making decisions and leading teams. They tend to value money, power, and status, and will work toward achieving them.

F) Conventional

Conventional people appreciate rules and regulations, and like having structure to their lives. They are logical thinkers and have a lot of self-control, which makes them the perfect people to work with data and details.

Nowadays, anyone can take a Holland Code personality test online to find what jobs might be right for them. Why not try it today?

1. Leé el texto y relacioná las profesiones con el tipo de personalidad correspondiente.

- 1) business owner, event manager, lawyer, salesperson
- 2) actor, art therapist, graphic designer, writer
- 3) computer programmer, historian, psychologist, surgeon
- 4) coach, counselor, social worker, teacher
- 5) carpenter, chef, nurse, pilot
- 6) accountant, analyst, editor, librarian

2. Marcá las cláusulas relativas e indicá si son especificativas o explicativas.

3. ¿Con qué tipo de personalidad te identificás? ¿Coincide con tu actual/futura profesión?

UNIDAD 2: Palabras terminadas en -ing

Al encontrarnos con una **palabra terminada en -ing** debemos prestar atención porque puede cumplir distintas funciones (gerundio, infinitivo, sustantivo, adjetivo, etc.)

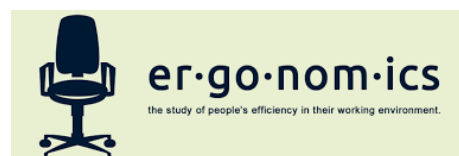

Texto 1

ERGONOMICS AND HEALTH

Two-thirds of the world's population spend one third of their lives **in earning a living** for themselves and their families. These essential occupations present hazards to workers' health. WHO and ILO estimate that they result in 160 million cases of occupational diseases and more than 120 million occupational accidents and injuries per year (including at least 200,000 fatalities). A significant number develop into **chronic debilitating disorders** and diseases which, since they are preventable, **are needlessly afflicting human health**.

The quality of life of workers can be improved markedly **by designing or modifying** the work processes, products and environment, in accordance with ergonomic considerations and adapted to different cultures and practices in **manufacturing and service industries**. With this in mind, the International Ergonomics Association (IEA) has designed ergonomic packages and strategies adjusted for gender and age that are relevant, efficient and acceptable for **the emerging industrial countries of the developing world**.

To this end, IEA has taken the lead in **advocating and supporting the development of rehabilitation ergonomics**. IEA, which is a nongovernmental organization in official relations with WHO, recommends that to minimize **human suffering** due to occupational injuries, priority should be given to: **reducing or eliminating ergonomic hazards in the workplace; setting up "return-to-work" programmes** with special emphasis on **the disabled and ageing population; designing control strategies** for the increasingly sedentary occupations associated with the microcomputer revolution; and **promoting the adoption of legislative measures to protect workers' health**.

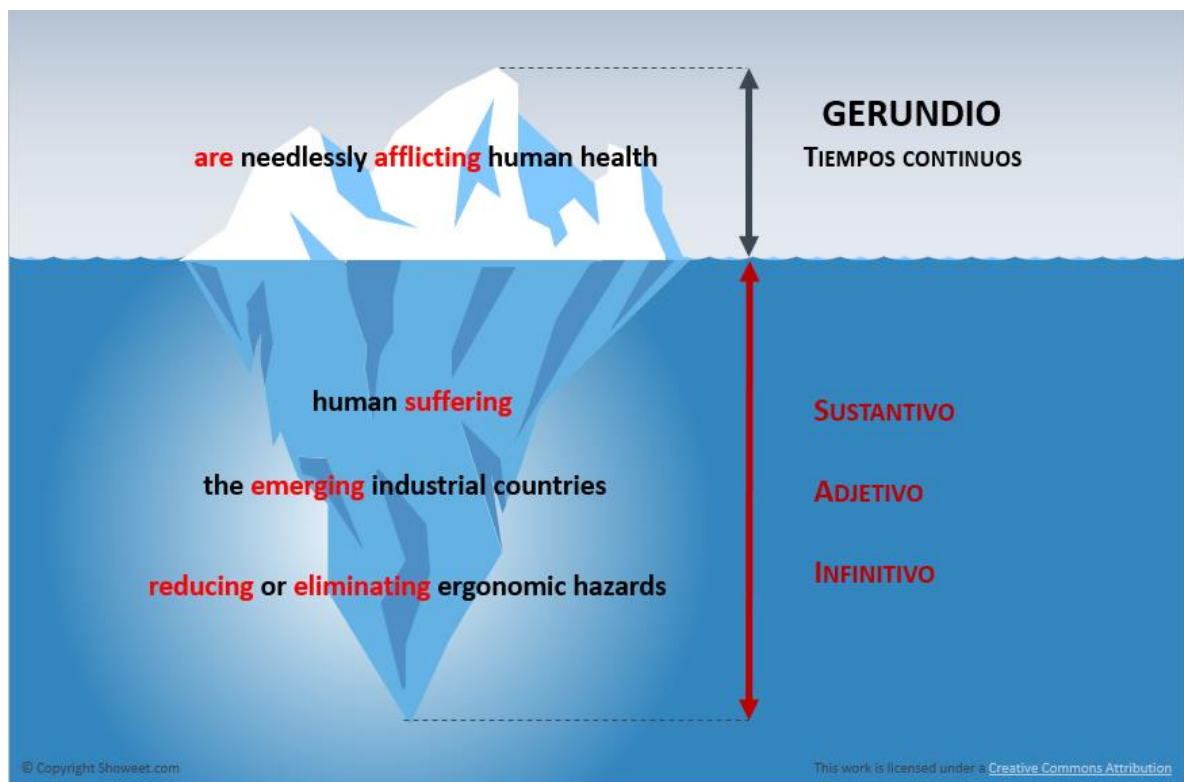

1. Leé el texto y respondé las siguientes preguntas:

1. ¿Qué hacen las personas durante un tercio de su vida?
2. ¿Qué causan las enfermedades ocupacionales?
3. ¿Cómo se puede mejorar la vida de los trabajadores?
4. ¿Para quiénes ha diseñado estrategias la IEA?
5. ¿Qué hace la IEA?
6. ¿Cuáles son las prioridades de la IEA?

Palabras terminadas en -ing

Los fragmentos resaltados en el texto 1 contienen **palabras terminadas en -ing**, pero no todas tienen la misma función.

Como se observa en la imagen, si bien la forma que más se asocia con las **palabras terminadas en -ing** es el **gerundio** que compone los tiempos continuos o progresivos (ej. present continuous, past continuous), hay **muchas otras funciones** “debajo de la superficie”.

GERUNDIO (-ando, -endo, -iendo)

✚ to be + verbo base + -ing (tiempos continuos/progresivos)

The IT market is growing rapidly.

by + verbo base + –ing

You can add more functions to this program by installing add-ins.

INFINITIVO (-ar, -er, -ir)

preposición + verbo base + –ing

The paper company is accused of polluting the river.

when + verbo base + –ing

When collecting the evidence, the police found mysterious footsteps.

verbo base + –ing en posición inicial

Developing a good business plan is a difficult task.

ADJETIVO

Developing countries have both a **growing** economy and a **growing** consuming population.

An **emerging** industry typically consists of just a few companies and is often centered around new technology.

The **working** environment includes both physical environment and work processes.

SUSTANTIVO

Marketing refers to activities a company undertakes to promote the **buying** or **selling** of a product or service.

A robust **ship-building** industry is a vital component of any strong economy.

Coal mining is the process of extracting coal from the ground.

CLÁUSULA SUBORDINADA ADJETIVA (relativa)

Most people [**working** in this company] are university graduates.

Most people [who work in this company] are university graduates.

The trees [**growing** in this region] are perennial.

The trees [which grow in this region] are perennial.

Plants and animals [**living** in the desert] must be able to adapt to extreme heat and dryness.

Plants and animals [that live in the desert] must be able to adapt to extreme heat and dryness.

Para saber +

Video: The best way to sit at your desk at work: <https://bit.ly/32yZbEC>

Actividad

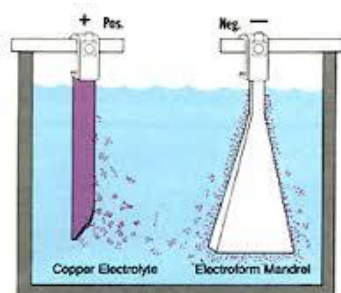

Indicá qué función tienen las palabras terminadas en **-ing** en estos ejemplos.

1. Fox **hunting** is forbidden in this area.
2. These products have better colours and **packaging**.
3. This is a very **interesting** novel.
4. Airline companies are **increasing** ticket prices.
5. **Being** in debt is a way of life for many people.
6. The public transport system in this country is **shocking**.
7. **Cooking** Italian food can be lots of fun.
8. You can get fit by **swimming** regularly.
9. Your English is **improving** day by day. Congratulations!
10. My favourite occupation is **reading**.

Texto 2

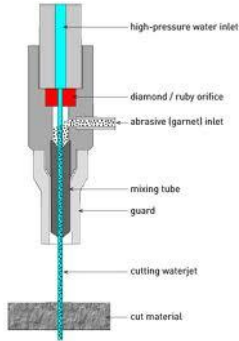

MODERN MANUFACTURING PROCESSES

A) Electroforming

Electroforming is a way of making very accurate metal parts. It is similar to electroplating in that a metal coating is deposited on a special form in an electrolytic solution. The difference is that the coating is thicker so that the form can be removed to leave a solid part. This process allows manufacturers to “grow” components with precise dimensions. It makes it possible to produce extremely accurate copies of masters. For this reason, electroforming is used in the manufacture of CDs.

B) Water jet abrasive cutting

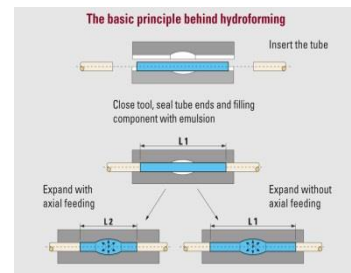

Water jet abrasive cutting uses a high pressure jet of water combined with an abrasive substance to cut through materials. The advantages of this form of cutting are that the jet can be adjusted and the kind of abrasive changed so that almost any kind of material can be cut. In addition, the material can be cut without changing its properties in any way. With heat, there is always some damage to the areas nearest the cut. This form of cutting has many applications. It can be used to cut metals, composites, and even thick concrete. At the other end of the scale, fine water jets, without

added abrasives, are used in surgery.

C) Hydroforming

Hydroforming is a way of shaping materials such as aluminum or ultralight steel. The metal is pushed into shape using fluid pressure. For example, to produce components for car bodies, steel tubes are placed inside a mould and high pressure applied in the tube which pushes the metal into the exact shape required. Hydroforming a component in this way means that several different operations such as stamping and welding are no longer required. Hydroforming is used where there is demand for lower weight with high strength. It is used in the manufacture of top-of-the-range sports cars and motorbikes, such as Harley Davidsons. It is also used in the aerospace industry to produce panels for aircraft.

1. Completá el cuadro con información relevante de cada proceso de fabricación.

PROCESO	VENTAJAS	EJEMPLOS DE USO

2. Marcá los ejemplos de palabras terminadas en *-ing* e indicá su función en cada caso.

Ej. *Electroforming* > sustantivo

Tiempos continuos o progresivos

El verbo **BE** se traduce como **ESTAR** y la base con la **terminación –ing** como verbo terminado en **–ando, –endo, –iendo**.

Estos verbos no siempre se pueden traducir textualmente; a veces se traducen por tiempos simples.

BE + base + –ing

PRESENTE	They	are <i>están</i>	solving <i>resolviendo</i> <i>(resuelven)</i>	the problem. <i>el problema.</i>
PASADO		were <i>estuvieron/ estaban</i>	solving <i>resolviendo</i> <i>(resolvían)</i>	
FUTURO		will be <i>estarán</i>	solving <i>resolviendo</i> <i>(resolverán)</i>	

We **are investigating** new material.

Estamos investigando un nuevo material.

Is the research team **confining** their attention to explanations of why and how events occurred?

.....

The institution **is not planning** its work for next year.

.....

El Presente Progresivo se traduce por Futuro cuando lo acompañan expresiones que implican hechos o circunstancias por venir.

The research team **is testing** new methods soon.

.....

They **are concluding** their project next year.

.....

The university **is offering** new courses next summer.

.....

Futuro perifrástico

BE + GOING TO + BASE = IR + A + INFINITIVO

They **are going to estimate** the cost for the new excavations.

Van a estimar el costo de las nuevas excavaciones.

We **are not going to find** the causes for this in the near future.

.....

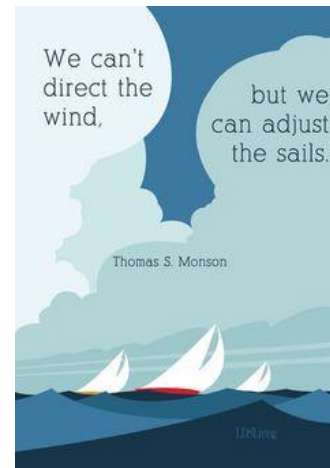

Professor Hopkins **is going to publish** his paper in an academic journal.

.....

UNIDAD 3: Verbos modales

Los **verbos modales** son verbos auxiliares que agregan una modalidad (posibilidad, habilidad, obligación, etc.) al verbo principal.

Texto 1

When we are young, we learn that tigers and sharks are dangerous animals. We might be scared of them because they are big and powerful. As we get older, however, we learn that sometimes the most dangerous animals are also the smallest animals. In fact, the animal that kills the most people every year is one that you have probably killed yourself many times: the mosquito.

While it may seem that all mosquitoes are biters, this is not actually the case. Male mosquitoes eat plant nectar. On the other hand, female mosquitoes feed on animal blood. They need this blood to live and produce eggs. When a female mosquito bites a human being, it transmits a small amount of saliva into the blood. This saliva may or may not contain a deadly disease. The result of the bite can be as minor as an itchy bump or as serious as death.

Because a mosquito can bite many people in the course of its life, it can carry diseases from one person to another very easily. Two of the deadliest diseases carried by mosquitoes are malaria and yellow fever. More than 700 million people become sick from these diseases every year. At least 2 million of these people will die from these diseases.

1. Léé el texto e indicá si las afirmaciones son verdaderas (V) o falsas (F).

1. El temor que generan los tigres y tiburones se debe a su tamaño y fuerza.
2. El mosquito macho tiene los mismos hábitos alimenticios que la hembra.
3. La picadura del mosquito no siempre tiene graves consecuencias.
4. Una persona infectada por un mosquito luego transmite la enfermedad a otras.

2. Marcá los verbos en las siguientes oraciones extraídas del texto. ¿Tienen alguna característica en común?

- a. We might be scared of them because they are big and powerful.
- b. While it may seem that all mosquitoes are biters, this is not actually the case.
- c. This saliva may or may not contain a deadly disease.
- d. The result of the bite can be as minor as an itchy bump or as serious as death.
- e. Because a mosquito can bite many people in the course of its life, it can carry diseases from one person to another very easily.

Verbos modales

Los verbos que marcaste en las oraciones de la tarea 2 se denominan **verbos modales**. Son **auxiliares** que se combinan con un verbo principal y tienen ciertas **características** particulares.

- Expresan el modo de un verbo: habilidad, posibilidad, obligación, necesidad, etc.

I can speak Chinese. (habilidad)

It may rain this afternoon. (posibilidad)

You must be at the airport at 5. (obligación)

- Se usan con un verbo principal en infinitivo sin 'to' (excepto *ought*)

You must pay now.

✗ You must to pay now.

He should drive carefully.

✗ He should to drive carefully.

- No agregan **s** en la 3ra persona singular del presente simple.

She can swim well.

✗ She cans swim well.

He must read this book.

✗ He musts read this book.

- No se conjugan en todos los tiempos verbales.

✗ They will can go with us.

✗ She musted study very hard.

- En una afirmación, el orden de las palabras es **sujeto + modal + verbo principal**.

Amy can't drive.

S + M + VP

You should walk.

S + M + VP

- En las preguntas, el orden de palabras es **modal + sujeto + verbo principal**.

Yes-No questions > Can they come?

Wh- questions > When can they come?

Los **verbos modales** más comunes son:

can, could, may, might, must, should, ought to

CAN (*puedo, puedes, puede, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
can	cannot / can't	Can...?

Al igual que el verbo **poder**, el modal **CAN** indica una **habilidad**:

Tom **can** **speak** five languages.

I **can't** **solve** these equations. They are too difficult for me.

Can you **play** chess?

También se usa para expresar una **posibilidad**:

It **can** **be** dangerous to drive if you are tired.

Sorry, I **can't** **help** you. I'm really busy now.

Can we **get** to London by train?

Y para dar o pedir **permiso**:

You **can** **stay** in the library one more hour.

Customers **cannot** **park** here. This area is only for employees.

Can we **leave** now?

COULD (*pude, podía, podría, pudiera/pudiese, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
could	could not / couldn't	Could...?

El modal **COULD** indica una **habilidad** o una **posibilidad en el pasado** (*pude/ podía*).

George **could** **play** baseball when he was young.

I **couldn't** **sleep** well last night.

Could you **finish** the report yesterday?

También puede indicar **situaciones hipotéticas o posibilidades en el futuro** (*podría*).

This **could** **be** a good business.

We **couldn't** **do** it without your help.

Could the balloon **fly** higher?

MAY (*puedo, puedes, puede, etc.*) **MIGHT** (*podría, podía, pudiera/pudiese, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
may might	may not might not	May...? Might...?

Los modales **MAY** y **MIGHT** se usan para referirse a una **situación hipotética**, que puede ser posible, pero **might** indica una **posibilidad más remota**.

It **may** **be** better to finish this now, rather than wait until tomorrow.

This **might not** **be** the most appropriate job for you.

May/Might it **rain** tonight?

Tanto **may** como **might** se utilizan para solicitar algo de manera formal y educada, pero **might** es más cortés.

May I **use** your telephone, please?

Might we **have** some more water?

MUST (*debo, debes, debe, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
must	must not / mustn't	Must...?

El modal **MUST**, como el verbo **deber**, se emplea para expresar **obligación o necesidad**:

You must **brush** your teeth after every meal.

We must not **drink** and drive.

When must we **deliver** the homework?

También puede indicar una **suposición o deducción**:

He must **live** near here because he always walks to work.

You have worked all day; you must **be** tired.

The street is wet. It must **have rained** last night.

Pero cuando suponemos que algo no es cierto usamos **can't**:

It can't **be** a mechanical problem; the car is new.

It can't **have been** Jane you saw this morning. She's out of town.

SHOULD (*debería, debiera, debiese, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
should	should not / shouldn't	Should...?

El modal **SHOULD** se emplea para expresar **obligación**, para dar o pedir **consejos e instrucciones**.

They should **practice** more if they want to win the championship.

You shouldn't **drive** so fast.

Should we **leave** a tip?

OUGHT TO (*debería, debiera, debiese, etc.*)

AFIRMATIVO	NEGATIVO	INTERROGATIVO
ought	ought not to / oughtn't to	Ought...?

El modal **OUGHT TO** es un sinónimo de **should** aunque es menos común.

They **ought to** work less.

You **ought not to** drink so much.

Ought we **to** be more worried about the environment?

Dado que los verbos modales NO se conjugan en todos los tiempos verbales, existen **EXPRESIONES EQUIVALENTES**:

BE ABLE TO (*ser capaz de*) = **can** (*poder*).

Will you **be able to** get tickets to the concert?

They **haven't been able to** study much today.

HAVE TO (*tener que*) = **must** (*deber*).

Did you **have to** work late yesterday?

We **will have to** get a visa to go to the US.

Actividad 1

En las siguientes tiras cómicas hay ejemplos de verbos modales. ¿Podés identificarlos? (modal + verbo principal) ¿Cuáles son sus equivalentes en español?

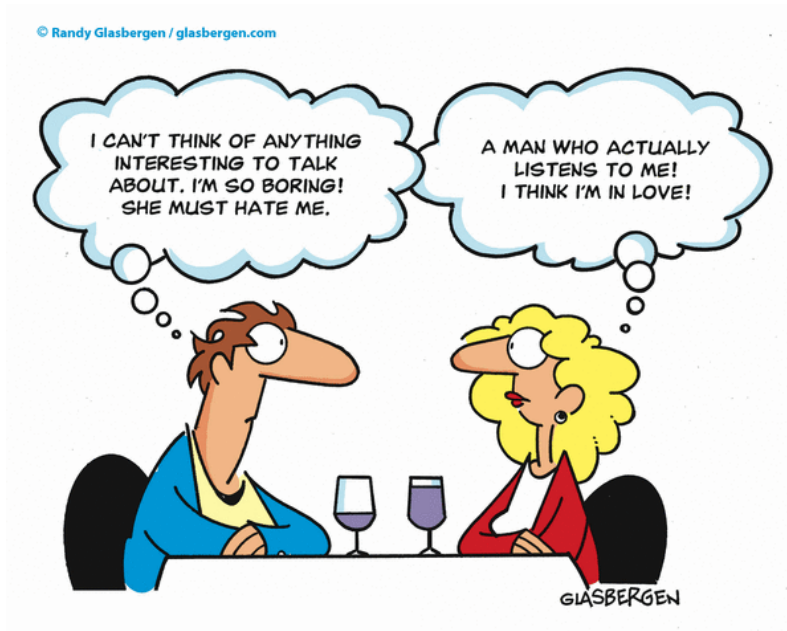

1)

© Randy Glasbergen / glasbergen.com

"I like everyone and I'm always in a good mood. That can't be normal!"

2)

3)

"Newspapers may not be as cool as the Internet,
but they're still the best way to read 50 year
old comics and yesterday's news."

Actividad 2

Indicá qué función tienen los verbos modales en estos ejemplos.

1. Metals which cool rapidly **may fracture**.
2. The testing of new planes **could cause** accidents.
3. We **should dilute** the acid before using it.
4. The new material **might resist** temperatures of 600 °C.
5. You **ought to remember** the theory.

6. A substance **can change** from one state into another.
7. We **cannot use** these substances in combination.
8. An error of calculus of the pilot **might be** disastrous.
9. You **must inspect** the equipment once a week.
10. **May** matter **exist** in three states?

Texto 2

Can acting be taught?

You cannot teach someone to be 'talented', but if an actor possesses natural talent, they must still learn how to express it through the skills of the performer: command of voice and speech; a feeling for words, movement and body language; and how to bring all these things together.

Voice and speech is the actor's primary skill. Most of their communication is through the spoken word, and the scripts actors work with now require a greater variety of voices and accents than they did in the past. However, as the actor is also the interpreter of the text, he or she must be very responsive to the character's use of language.

Present-day acting is also very visual and makes great demands on the actor in terms of physical movement. The actor may have to represent not only many types of people but also objects and machines. Repose and expressiveness are qualities actors need to convey through the body. They may even find themselves working in performances which involve dancing, falling and acrobatics.

Mental training is vital too. Actors have to give 100% attention to what they are doing; they have to think and respond creatively; to look and learn; and recall and recreate emotion in a selective way. They also have to think deeply about a text and analyse it. Finally, actors have to learn to work with each other, the director and the audience.

Acting is a very practical business, and what you do has to look and sound right. The audience may not know about the mysteries of acting but they do know about people and life.

1. **Marcá los verbos modales (modal + verbo principal) ¿Qué indican? (habilidad, posibilidad, obligación, etc.) ¿Hay alguna expresión equivalente?**
2. **Observá las palabras subrayadas. ¿Qué tienen en común? ¿Cómo las traducirías? (Repaso Unidad 2)**

UNIDAD 4: Voz pasiva

La **voz pasiva** es una estructura gramatical que se utiliza cuando no se quiere destacar quién o qué realiza la acción, sino que se enfatiza quién o qué la recibe.

Respect is earned.
Honesty is appreciated.
Trust is gained.
Loyalty is returned.

La voz gramatical

Lee los siguientes pares de oraciones y respondé las preguntas.

1

a	They	clean	the offices	at night.
b	The offices	are cleaned		at night.

2

a	They	found	an old letter	in the box.
b	An old letter	was found		in the box.

3

a	Most shops	accept	credit cards.
b	Credit cards	are accepted	by most shops.

4

a	Alexander Graham Bell	invented	the telephone.
b	The telephone	was invented	by Alexander Graham Bell.

- f. ¿Cada par de oraciones tiene el mismo significado, es decir, expresa la misma idea?
- g. ¿Cuál es el sujeto de la primera oración de cada par?
- h. ¿Cuál es el sujeto de la segunda oración?
- i. ¿En qué tiempo están conjugados los verbos en cada par de oraciones?

La **voz gramatical** es una categoría gramatical asociada al verbo que indica la **relación** existente entre el **sujeto**, el **verbo** y el **objeto** de la oración. Esta relación nos permite establecer si la oración es **activa** o **pasiva**.

Cuando el verbo de una oración está en **VOZ ACTIVA**, el **sujeto realiza una acción**. El foco de atención recae en el sujeto.

Mientras que, si el verbo está en **VOZ PASIVA**, el **sujeto recibe la acción**. Pasa a primer plano el que era objeto de la oración activa.

S V O
They **clean** **the offices** at night.

The offices **are cleaned** at night.
S V

S V O
They **found** **an old letter** in the box.

An old letter **was found** in the box.
S V

En ambos casos, **la relación existente entre sujeto, verbo y objeto es la misma**. La diferencia consiste en que **se modifica el punto de vista**. En la voz activa, lo que atrae el interés es qué o quién realiza la acción. Y en la voz pasiva, nos enfocamos en qué o quién recibe la acción.

Cuando en una oración activa hay un **objeto directo** y un **objeto indirecto**, es más común colocar el **objeto indirecto como sujeto** de la oración pasiva. No obstante, también se puede utilizar el **objeto directo como sujeto**.

S V OI OD
He gave **me** **a bunch of flowers**.

I was given **a bunch of flowers**.

A bunch of flowers was given **to me**.

¿Cómo se forma la voz pasiva?

La **voz pasiva** se construye utilizando el verbo **TO BE** en el tiempo verbal correspondiente y el verbo principal en participio pasado.

to be + verbo principal en participio pasado

Por ejemplo, en la oración *They clean the offices at night* el verbo es **regular**, entonces su **participio pasado termina en -ed**. Por eso, en la frase verbal en voz pasiva, el verbo principal *clean* se transforma en el participio pasado *cleaned*.

Mientras que, en la oración *They found an old letter in the box*, el verbo es **irregular** y para saber cuál es su participio hay que buscarlo en la **lista de verbos irregulares** (ver Unidad 7, Nivel 1) o en el **diccionario**. En este caso, el participio es igual al pasado simple (infinitivo: *to find*; pasado simple: *found*; participio pasado: *found*).

Veamos cómo se forma la **voz pasiva** con el verbo **TO BE** en **distintos tiempos verbales**:

Present Simple	Organic food is sold in this shop.
Present Continuous	A new airport is being built .
Past Simple	The novel was translated into Russian.
Present Perfect	Be careful! The door has been painted .
Past Perfect	When we arrived all the seats had been taken .
Future Simple	The alpinists will be rescued soon.
Conditional Simple	The manager said that a strategic plan would be announced soon.

To be born (verbo *nacer*, en español) es una **forma pasiva** que se usa más frecuentemente en tiempo pasado. Sin embargo, en algunos casos, es adecuado el presente o el futuro.

- My sister **was born** in 1979.
- Where **were you born**?
- Around 100 babies **are born** in this hospital every week.
- We don't know on exactly which day the baby **will be born**.

Los **verbos modales** también se pueden expresar en **voz pasiva**:

- This book **can be bought** in most bookshops.
- Flying cars **might be invented** soon.
- Social networks **must be used** carefully.
- Music **should be heard** at reasonable volume.

Y también la expresión equivalente **have to**: Animals **have to be treated** with respect.

¿Cuándo se usa la voz pasiva?

- ✚ Cuando no es necesario mencionar **qué o quién realiza la acción** porque es **evidente**.

The post **was delivered** on time.
(Se deduce que el que reparte el correo es el cartero.)

- ✚ Cuando **no sabemos qué o quién realiza la acción**, o bien **no es relevante** mencionarlo.

The wheels of my bike **were stolen** yesterday.
(No sabemos quién ha robado las ruedas de la bicicleta.)

Is your website **updated** periodically?

(No especificamos quién actualiza la página porque no es relevante en este contexto.)

✚ Cuando **se enfatiza la acción** y no quién la realiza.

The Eiffel Tower **was built** for the 1889 International Exhibition.

(No se quiere enfatizar quién construyó la torre sino con qué propósito se hizo.)

Podemos mencionar **qué o quién realiza la acción** utilizando la **preposición BY**:

- Credit cards **are accepted by** most shops.
- Messages **are sent by** the operators.
- The telephone **was invented by** Alexander Graham Bell.
- The problem **was considered by** Hamilton.

Cuando no aparece el agente de la acción, se traduce, siempre que sea posible, por una **oración pasiva con “se” y el verbo en voz activa**.

- On page 7 the new law **is explained**.
- In Fig. 79 the statue **is shown**.

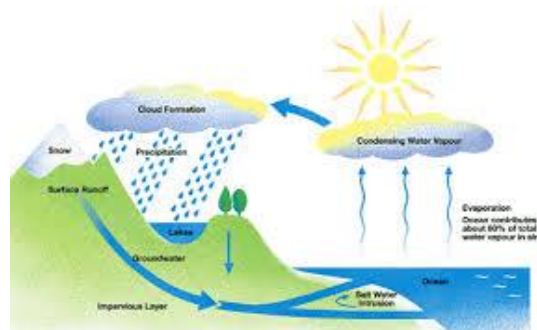

En la página 7 **se explica** la nueva ley.

En la Fig. 79 **se muestra** la estatua.

Texto 1

THE WATER CYCLE

The earth's supply of water is stable and is used over and over again. Most of the water (98 percent) is present in oceans, lakes, and streams. Of the remaining 2 percent, some is frozen in polar ice and glaciers, some is found in the soil, some is in the atmosphere as water vapour, and some is in the bodies of living organisms.

Sunshine evaporates water from the oceans, lakes, and streams, from the moist soil surfaces, and from the bodies of living organisms, drawing the water back up into the atmosphere, from which it falls again as rain. This constant movement of water from the earth into the atmosphere and back again is known as the water cycle. The water cycle is driven by solar energy.

Some of the water that falls on the land percolates down through the soil until it reaches a zone of saturation. In the zone of saturation, all holes and cracks in the rock are filled with water. Below the zone of saturation is solid rock through which the water cannot penetrate. The upper surface of this zone of saturation is known as the water table.

1. Respondé las siguientes preguntas:

- 1) El 98% del agua está presente en océanos, lagos y arroyos, ¿y el resto?
- 2) ¿A qué se llama ciclo del agua?
- 3) ¿Qué impulsa el ciclo del agua?
- 4) ¿Qué sucede en una zona de saturación?
- 5) ¿Cómo se denomina la superficie superior de la zona de saturación?

2. Marcá los verbos en voz pasiva que tuviste que interpretar para responder las preguntas.

Actividad 1

¿Cuáles de estas oraciones están en voz pasiva? Marcá los verbos.

1. The university is visited by hundreds of foreign students.
2. The building will be inaugurated next week.
3. There are an estimated 500,000 earthquakes around the world each year.
4. Messiah was composed in 1741 by Händel.
5. Renewable resources can be easily replaced or recovered.
6. Scientists are developing a new vaccine.
7. Original paintings are sold for thousands of dollars.
8. The lack of sleep can affect growth and the immune system.
9. There are eight different blood types which are described using the letters A, B, and O.
10. The new members of the organization were not invited to the conference.

Texto 2

How Towns Have Arisen

Most villages and towns on the British Isles originated because of their favourable situation for trade. Rather more than a hundred years ago, a great change came over the land. Many machines **were invented** about that time. Spinning and weaving, for example, which **had** previously **been done** by hand, **were done** by machinery that **were driven** by water or steam-power. The work which usually **was done** in the houses of the people began to be carried on in large mills or factories, and workers found it convenient to live near them. More and more factories **were built** and men and women **left** the country districts in great numbers and crowded into towns. Since then the movement of people into towns has been going on until now. All over Britain there are mining and manufacturing areas, such as the Lancashire cotton district, the Black county of Midland, and others. A great many towns **are found** close together in those districts, and a great many people **live** within a small area, so that the population **is** very dense.

Observá los verbos resaltados en el texto y completá la tabla según el ejemplo.

Verbo	Voz activa	Voz pasiva	Tiempo verbal	Traducción al español
were invented		X	Pasado Simple	fueron inventadas

Actividad 2

En el Texto 2, *Modern Manufacturing Processes*, de la Unidad 2, buscá ejemplos de verbos en voz pasiva y expresalos en español.

UNIDAD 5: Expresiones interrogativas

Las **preguntas** o **expresiones interrogativas** pueden ser de sí o no (cerradas) o informativas (abiertas). Las cerradas se responden *yes/no* y las abiertas se responden con información sobre qué, quién, dónde, cuándo, por qué, etc.

Tipos de preguntas

Leé los siguientes diálogos y completá los espacios con las preguntas adecuadas:

Edna: Please, sir, an inspector's called.

Birling: An inspector?

Edna: A police inspector. He says his name's inspector Goole.

Birling: Don't know him.

Edna: Yes, sir. He says it's important.

(Extraído de la obra *An Inspector Calls* (Acto 1) J. B. Priestley, 1947.)

Hercule Poirot:

MacQueen: Samuel Edward Ratchett.

Hercule Poirot:

MacQueen: Yes.

Hercule Poirot:

MacQueen: I don't know.

(Extraído de la novela *Murder on the Orient Express* (Parte 1, Capítulo 6) Agatha Christie, 1934.)

1) Was he an American citizen?

4) What was his full name?

2) What part of America did he come from?

5) What kind of inspector?

3) Does he want to see me?

En estos diálogos, los personajes hacen **2 tipos de preguntas**:

INFORMATIVAS o ABIERTAS	DE SÍ/NO o CERRADAS
2) What part of America did he come from?	1) Was he an American citizen?
4) What was his full name?	3) Does he want to see me?
5) What kind of inspector?	

Las **preguntas INFORMATIVAS o ABIERTAS**, también denominadas **Wh-questions**, requieren como **respuesta algún tipo de información** y comienzan con un **pronombre interrogativo**: *what, who, when*, etc.

WHAT	¿Qué? ¿Cuál?
WHICH	¿Cuál? ¿Qué?
WHO	¿Quién? ¿Quiénes?
WHOM	¿Quién? ¿Quiénes? ¿A quién? ¿A quiénes?
WHOSE	¿De quién? ¿De quiénes?
WHY	¿Por qué? ¿Para qué?
WHEN	¿Cuándo?
WHERE	¿Dónde? ¿A dónde? ¿Adónde?
HOW	¿Cómo? ¿Cuán? ¿A cuánto?

Ejemplos:

1) What countries use electricity from nuclear power stations?

.....

2) What are the advantages of these systems?

.....

3) Which gas in the air is more important to humans?

.....

4) Why are great rivers a significant economic resource?

.....

5) Who made the first electric lamp?

.....

6) Whom did they rescue?

.....

7) When does a substance have a definite shape?

.....

8) Where did Einstein die?

.....

9) How can it be proved that the Earth is round?

.....

10) Whose life did Edison save?

.....

Combinaciones con el interrogativo HOW

How many	¿Cuántos/as?
How much	¿Cuánto?
How long	¿Cuánto tiempo? ¿Qué longitud? ¿Qué extensión?
How far	¿A qué distancia? ¿Qué tan lejos?
How often	¿Cuántas veces? ¿Con qué frecuencia?

Ejemplos:

1) How many megawatts can this power station generate?

.....

2) How much oxygen is needed to burn a ton of coal?

.....

3) How long does the moon take to go round the Earth?

.....

4) How far is the sun from the Earth?

.....

5) How deep is the Atlantic Ocean?

.....

6) How old is this university?

.....

7) How thick is the troposphere?

.....

Combinaciones interrogativas con preposiciones

En español, cuando hacemos preguntas colocamos la preposición delante del interrogativo. En **inglés**, en cambio, el **interrogativo** aparece **al principio** y la **preposición** **al final**.

Ejemplos:

Where are you **from**?

↓
¿**De** dónde sos?

What are they talking **about**?

↓
¿**De** qué están hablando?

Who do you live **with**?

↓
¿**Con** quién vivís?

1) Which other disease was influenza confused **with**?

.....

2) What are computers used **for**?

.....

3) Who did Dr. Simpson work **with**?

.....

4) What does a mercury thermometer consist **of**?

.....

5) Where do minerals come **from**?

.....

Las **preguntas DE SÍ/NO o CERRADAS**, denominadas **Yes-No questions**, requieren una **respuesta afirmativa o negativa** y comienzan con un **auxiliar que indica el tiempo verbal** (*Do/Does, Did, Will, etc.*) o un **auxiliar modal** (*Can, Must, Should, etc.*)

Formas interrogativas según los tiempos verbales: auxiliares *do/does, did, will*

PRESENTE

Do	I you	work?	¿Trabajo? ¿Trabajas? / ¿Trabaja?
Does	he she it		¿Trabaja?
Do	we you they		¿Trabajamos? ¿Trabajan? ¿Trabajan?

PASADO

Did	I you	work?	¿Trabajé? ¿Trabajaba? ¿Trabajaste? ¿Trabajabas? / ¿Trabajó? ¿Trabajaba?
	he she it		¿Trabajó? ¿Trabajaba?
	we you they		¿Trabajamos? ¿Trabajábamos? ¿Trabajaron? ¿Trabajaban? ¿Trabajaron? ¿Trabajaban?

FUTURO

Will	I you	work?	¿Trabajaré? ¿Trabajarás? / ¿Trabjará?
	he she it		¿Trabjará?
	we you they		¿Trabajaremos? ¿Trabjarán? ¿Trabjarán?

Ejemplos:

1) Do you study French?

.....

Yes, I do.

No, I do not. / No, I don't.

2) Does the university offer language courses?

.....

Yes, it does.

No, it does not. / No, it doesn't.

3) Did the radioactive elements affect the laboratory personnel?

.....

Yes, they did.

No, they did not. / No, they didn't.

4) Will you take part in the new industrial project?

.....

Yes, I will.

No, I will not. / No, I won't.

Is the coronavirus crisis a chance to reset the world? <https://bbc.in/37he1Ur>

Texto 1

A) Leé los siguientes fragmentos extraídos del artículo *What green habits have you adopted in 2020?* y relacionalos con los subtítulos correspondientes. (Hay uno extra.)

1. In our neighbourhood there is a very nice street-food market where we buy our supplies for the week. The vendors are farmers from the region around, some “bio”, some not. I regularly buy milk from a farm between the woods close by where they raise cattle that have a pretty casual life on the meadows of the valley. When you bring your own bottle you can directly tap the milk from an automat in a little room where you can also buy cheese and sausages. **Geertje König, 53, Bonn, Germany**

2. Since July 2020, I decided to share my Tesla Model 3 with our employees – our Italian physiotherapists – so they can visit their relatives without buying a car, and without using air travel. **Felix Niedermann, 55, Lucerne, Switzerland**

3. We have done lots of little things to help. I set the thermostat low, put on more clothes if it's cold, have solar and hot water panels to maximise electricity production. In addition, we've installed triple-glazed windows to keep heat in and cold out. We also make our own elderflower cordial and of course drink tap water, never bottled water.

Caroline Quick, 77, Cambridgeshire, UK

4. Lockdown meant that the money we usually spent on travel, dining out, concerts, etc. built up in our bank accounts. We took a conscious decision to spend that surplus on those goods and services suffering most economic damage, buying much more online and giving work to local builders and tradesmen. ***John Davies, 79, and Jacqui Davies, 74, Wales, UK***

5. Since the end of March, we have decided to reduce or stop completely travelling by air. We will spend holidays in this country or in places that can be reached by train. ***John Harris, 80, and Christine Harris, 78, Newcastle-upon-Tyne, UK***

(Extraído de *The Guardian*: <https://bit.ly/3oe5RIM>)

- A.** Shopping locally
- B.** Rethinking transport
- C.** Going plastic-free
- D.** Embracing the good life with sustainable eating
- E.** Travelling (not) by air
- F.** Making the switch to solar power

B) Volvé a leer los textos y respondé las preguntas:

- 1)** Where does Geertje buy food supplies for the week?
- 2)** What can you buy on the farm?
- 3)** Who does Felix share his car with?
- 4)** How does Caroline maximise electricity production?
- 5)** Why has she installed triple-glazed windows?
- 6)** What kind of water does she drink?
- 7)** What did John and Jacqui decide to spend their money surplus on?
- 8)** Where will John and Christine spend their holidays?

Texto 2

1. Lee las siguientes afirmaciones. ¿Creés que son verdaderas o falsas?

- 1) The Concorde could fly at the speed of sound.
- 2) A flight from London to New York usually took about eight hours on the Concorde.
- 3) Only rich people could usually afford to travel on the Concorde.
- 4) The Concorde was very fuel-efficient.
- 5) The plane was retired in 2003.

THE CONCORDE: A SUPERSONIC DREAM

The Concorde was one of the most famous airplanes in the history of aviation. It was a supersonic passenger jet, which means it could fly faster than the speed of sound. The aircraft was developed together by British and French engineers in the 1960s, and its first flight took place in 1969. In 1976, it entered regular service with two airlines: British Airways and Air France.

The Concorde was able to travel at twice the speed of sound, known as Mach 2. This meant it could cross the Atlantic Ocean in less than four hours, while normal planes took seven or eight. For example, a flight from London to New York could be completed in just over three hours. Passengers enjoyed luxury service on board, with fine food, drinks, and comfort.

However, flying on the Concorde was not for everyone. Tickets were extremely expensive, and only wealthy passengers, business executives, and celebrities could usually afford them. The plane also had some limitations: it could only carry around 100 passengers, and it consumed much more fuel than other aircraft.

Another problem was the loud “sonic boom” created when the Concorde broke the sound barrier. Because of this noise, it was not allowed to fly supersonically over land, only over oceans. In 2000, a tragic accident occurred when an Air France Concorde crashed near Paris, killing 113 people. Combined with rising fuel costs and lower demand, the accident marked the beginning of the end. Both airlines retired their Concorde fleets in 2003.

Today, the Concorde remains a symbol of technology, speed, and elegance. Although it is no longer flying, many people still remember it as the most iconic plane of the 20th century.

B) Respondé estas preguntas con información del texto y con lo que sabés.

- 1) Which countries developed the Concorde?
- 2) How long did it take to cross the Atlantic on the Concorde?
- 3) What kind of passengers usually flew on it?
- 4) Why couldn't the Concorde fly supersonically over land?
- 5) What happened in the year 2000?
- 6) Why did the airlines retire the Concorde?

C) A partir del contexto, ¿podés inferir el significado de las siguientes palabras?

Nouns

aircraft _____
barrier _____
fleets _____

Adjectives

expensive _____
wealthy _____
rising _____

Verbs

afford _____
crashed _____
remains _____

Adverbs

extremely _____
usually _____
still _____

UNIDAD 6: Tiempos perfectos

El tiempo **Presente Perfecto** se forma con el auxiliar HAVE + participio pasado y se usa para hablar de un evento pasado que aún tiene efectos en el presente. Mientras que el **Pasado Perfecto** combina HAD + participio pasado y se emplea para acciones que ocurrieron antes de otra en el pasado.

I am strong because
I've been weak

I am fearless
because I've
been afraid

I am wise because
I've been foolish.

Texto 1

ENDANGERED SPECIES

The impact humanity is having on the environment is rarely out of the news these days, with the subject of global warming receiving an especially large amount of coverage.

Another important, but perhaps less well-known environmental issue is that of endangered species. These are groups of animals which are so low in number that they could become extinct. In most cases this is largely because of human activity.

Some scientists **have suggested** that at least 10% of the world's birds, 30% of amphibians and 25% of mammals are endangered, with the latter group including some very well-known animals.

The total number of tigers, for example, **has fallen** by more than 90% in the last hundred years. There are now fewer than 7,000, all living in southern and eastern Asia. The decline **has been** mainly due to illegal hunting, with hunters selling the tigers' bones and body parts for use in traditional medicines.

The number of rhinoceroses in the world **has** also **fallen** dramatically, and for similar reasons. They are illegally hunted for their horns, which are believed to be a vital ingredient in some traditional medicines. There are now fewer than 10,000 rhinoceroses left.

Elephants are also an endangered species. They are illegally hunted for their ivory tusks, and their area of habitat is being reduced as the human population increases rapidly around them.

Recent history **has shown**, however, that the populations of endangered species can increase if human behaviour changes.

A good example is a mammal that can grow to a length of more than 30 metres and a weight of more than 180 tonnes, and is believed to be the largest animal that **has** ever **lived** on our planet: the blue whale. As a result of hunting, blue whales were very close to becoming extinct during the first half of the twentieth century, but in the 1960s they began to be protected under international law. Since then their total population **has increased**, although it is still probably less than 5% of what it once was.

Respondé las siguientes preguntas:

- 1) ¿Qué han sugerido los científicos con respecto a las especies en peligro de extinción?
- 2) ¿Qué ha sucedido con la cantidad total de tigres? ¿Por qué?
- 3) ¿Qué ha ocurrido con los rinocerontes? ¿A qué se debe?
- 4) ¿Qué ha demostrado la historia reciente?
- 5) Se cree que la ballena azul es ...
- 6) ¿Qué ha sucedido con la ballena azul desde la década del '60?

Presente Perfecto (*Present Perfect*)

Los **verbos** resaltados en el texto *Endangered species* están conjugados en el tiempo **Presente Perfecto (*Present Perfect*)** que corresponde al tiempo **Pretérito Perfecto en español**.

El Presente Perfecto se forma con el **auxiliar HAVE/ HAS** acompañado por el **participio pasado** del verbo principal. El auxiliar HAVE/ HAS se traduce por **HABER**.

AFIRMATIVO

I You	have ('ve)	gone written lost	to the park. the report. the keys.
He She It	has ('s)		
We You They	have ('ve)		

Ejemplos:

John Mc Carthy **has made** the most valuable contributions to the field of genetics.

.....

Researchers **have found** new data to support their hypothesis.

.....

NEGATIVO

I You	have not (haven't)	gone written lost	to the park. the report. the keys.
He She It	has not (hasn't)		
We You They	have not (haven't)		

Ejemplos:

The scientist **has not published** her results yet.

.....

New graduates **have not developed** a profitable career yet.

.....

INTERROGATIVO

Have	I you	gone written lost	to the park? the report? the keys?
Has	he she it		
Have	we you they		

Ejemplos:

Have his findings **become** the most widely recognized in the discipline?

.....

When **have** people **discovered** the truth?

.....

Usos del Presente Perfecto

El tiempo verbal **Presente Perfecto** (*Present Perfect*) se usa para:

✚ Mostrar una **relación entre el pasado y el presente**.

I **have studied** this grammar point so many times and it's still difficult.

(He estudiado este concepto gramatical un montón de veces y sigue siendo difícil.)

En este ejemplo, **el pasado** (he estudiado) se conecta con **el presente** (sigue siendo difícil).

✚ Hablar de **acciones o tiempos que no han terminado**.

I **have lived** in Spain **since** 2013.

(He vivido en España desde 2013. / Llevo viviendo en España desde 2013. / Vivo en España desde 2013.)

I **have lived** in Spain **for** 7 years.

(He vivido en España durante 7 años. / Llevo viviendo en España 7 años. / Vivo en España hace 7 años. / Hace 7 años que vivo en España.)

Aquí la acción expresada por el verbo *vivir* no ha terminado, pues esta persona sigue residiendo en España. Utilizamos **since** o **for** para indicar, respectivamente, cuándo empezó o cuánto tiempo ha durado la acción.

Se usa **since** para indicar **momentos concretos** en el tiempo y **fechas** (since last year, since I was a child, since November 7) y se emplea **for** para **períodos de tiempo** (for two years, for a fortnight, for 20 days).

I've **been** to the gym three times this week. (Esta semana he ido tres veces al gimnasio).

El período de tiempo expresado en **this week** no ha terminado todavía. Quizá incluso es jueves y esa persona va a ir al gimnasio otras tres veces más antes de que termine la semana.

✚ Hablar de **experiencias** que hemos tenido **en el pasado y han terminado**, pero **no especificamos cuándo**.

I **have been** to the USA three times. (He estado tres veces en Estados Unidos).

Se podría argumentar que este caso es similar al ejemplo de *this week*, ya que estamos refiriéndonos a ir a Estados Unidos a lo largo de tu vida, que evidentemente no ha terminado aún.

A: **Have** you **ever been** to Rome?

B: Yes, I have. Many times.

C: No, I've **never** been to Rome.

✚ Referirnos a eventos que **han terminado muy recientemente**.

I've **just heard** the news - it's unbelievable! (Acabo de oír las noticias. ¡Es increíble!).

✚ Hacer **afirmaciones** y **preguntas** acerca de **cosas que hemos hecho o no**.

I **haven't seen** this film **yet**. Is it good? (No he visto esta película todavía. ¿Es buena?)

I've **already seen** this film - the ending is terrible. (Ya he visto esta película. El final es tremendo).

Have you **cleaned** the bathroom **yet**? (¿Ya has limpiado el baño?)

Aquí el hablante asume que en algún momento el interlocutor va a limpiar el baño.

Actividad 1

Marcá los verbos en Presente Perfecto. ¿Cómo los traducirías?

- 1) Scientists have noted that the motion of the tectonic plates has resulted in changes in the relative location and amount of continental and oceanic crust on the Earth's surface.
- 2) Erosion has formed mountain peaks, valleys, coastlines and other interesting features of the Earth.
- 3) Like all scientific theories, the theory of evolution has developed through decades of scientific observations and experimentation.
- 4) The world's oceans have warmed 50 percent faster over the last 40 years than previously thought due to climate change.
- 5) Generations of students have found that sociology makes them look at the world in new ways.
- 6) It's fascinating to see how technology has transformed the way we live and work over the span of 20 years.
- 7) Digital technology has made us smarter and helped us optimize our time, be more productive and communicate more effectively.
- 8) The Third Industrial Revolution of the past few decades created changes that many of us have experienced.

Pasado Perfecto (*Past Perfect*)

El tiempo verbal **Pasado Perfecto (*Past Perfect*)** expresa una acción ocurrida antes que otra en el pasado y corresponde al **Pretérito Pluscuamperfecto en español**.

Se forma con **HAD** (pasado del auxiliar **have**) acompañado por el **participio pasado** del verbo principal. El auxiliar HAD se traduce por **HABER**.

AFIRMATIVO

I	had ('d)	studied visited gone	French before. the museum in my previous trip. home when he arrived.
You			
He			
She			
It			
We			
You			
They			

Ejemplos:

She only understood the movie because she **had read** the book.

.....

I met Jim last week. **We'd been** at school together but **we'd lost** touch with each other.

.....

NEGATIVO

I	had not (hadn't)	studied visited gone	French before. the museum in my previous trip. home when he arrived.
You			
He			
She			
It			
We			
You			
They			

Ejemplos:

The grass was yellow because it **hadn't rained** all summer.

.....

We **hadn't had** breakfast when he arrived.

.....

INTERROGATIVO

Had	I you	studied visited gone	French before? the museum in my previous trip? home when he arrived?
	he she it		
	we you they		

Ejemplos:

Had you **studied** English before you moved to New York?

.....

Had they ever **attended** an international congress?

.....

Diferencia entre Presente Perfecto y Pasado Perfecto

El Pasado Perfecto es muy similar al Presente Perfecto debido a que el evento también se inició en el pasado. Sin embargo, **la diferencia entre los eventos es que el evento del Pasado Perfecto también terminó en el pasado**. Por ejemplo, *I had studied in China last year*. Esto implica que el evento sucedió hace mucho tiempo.

(Fuente: EF English Live)

Cuando aparecen **have had** colocados juntos en una oración puede resultar confuso. Por ejemplo, I have had a cold.

Entonces, ¿esta oración está en Presente Perfecto debido a **have** o en el Pasado Perfecto debido a **had**?

Para identificar el tiempo correcto, hay que mirar siempre el primer **have** o **had**. En esta oración, se utilizó primero **have**, por lo tanto, esta oración está en **Presente Perfecto**.

Esta misma oración en **Pasado Perfecto** se expresa así: I had had a cold, porque el primer **had** es el auxiliar **have** en pasado (había) y el segundo **had** es el participio pasado del verbo **have** (tenido).

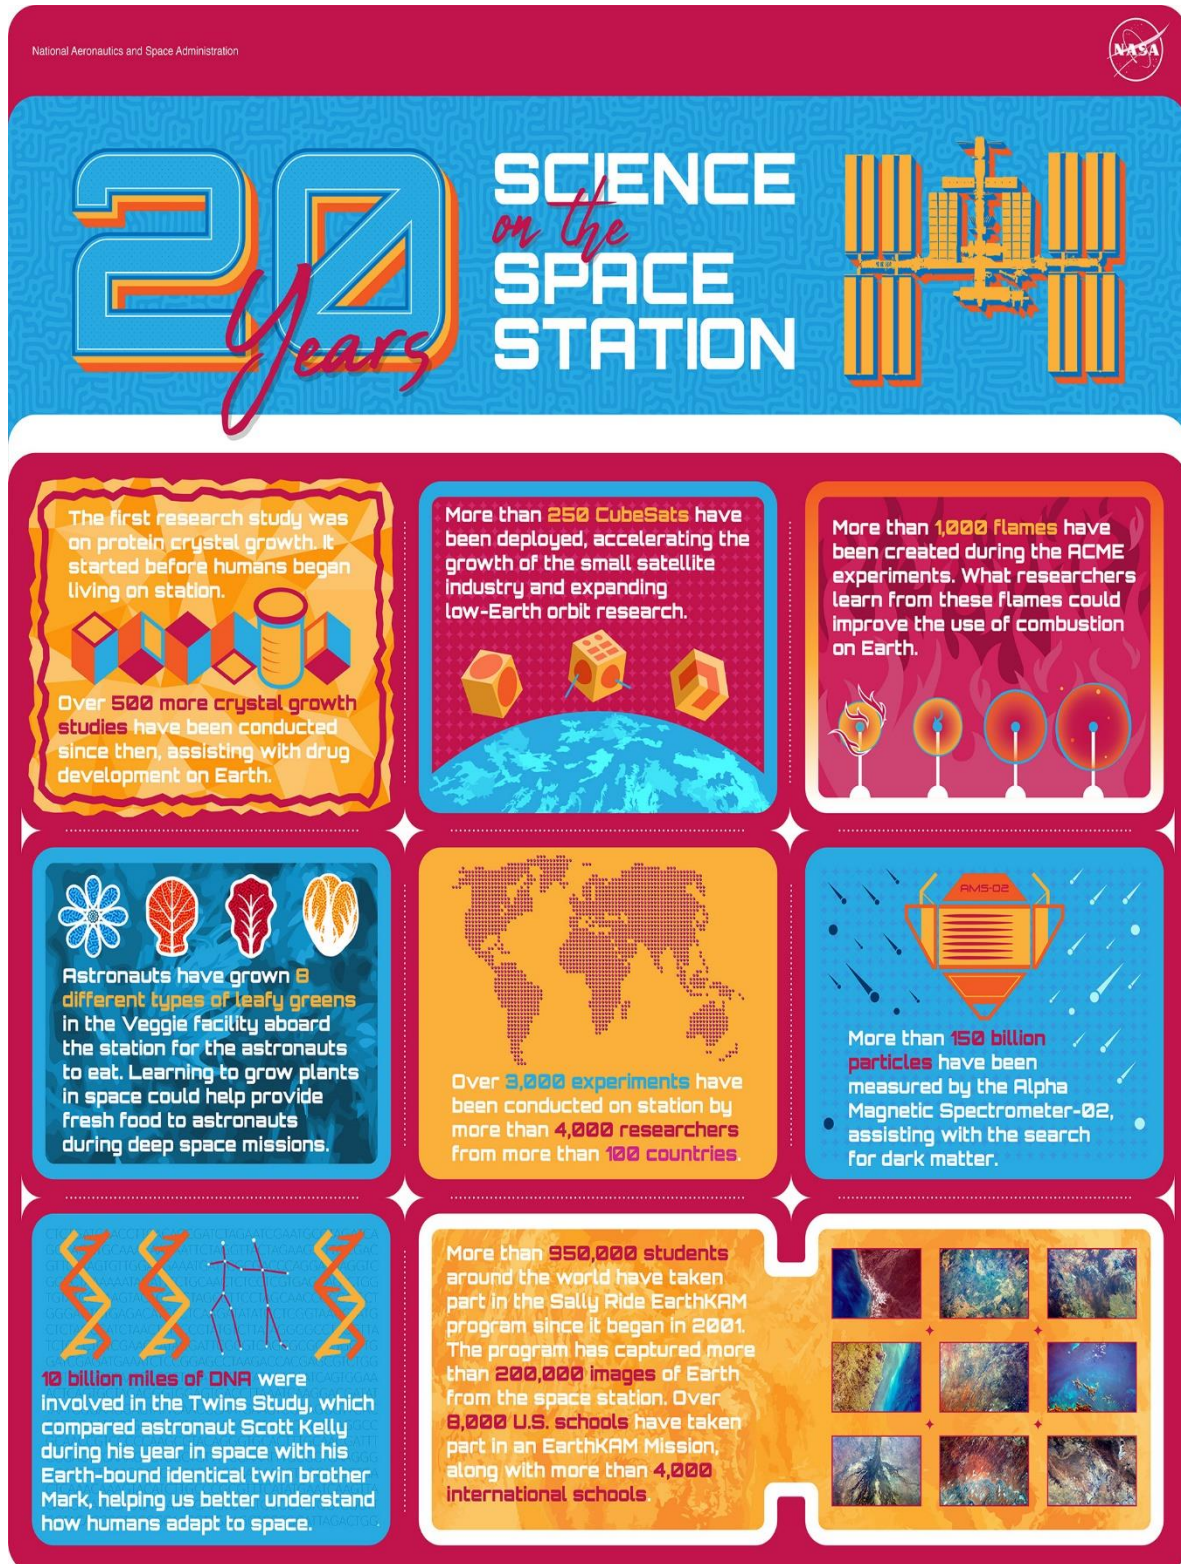

Presente Perfecto	I	have	had	a cold.
		auxiliar (he)	participio pasado de have (tenido)	
Pasado Perfecto	I	had	had	a cold.
		auxiliar (había)	participio pasado de have (tenido)	

Texto 2

Leé los siguientes ejemplos del folleto de la NASA, marca los verbos en Presente Perfecto e indica si están en voz activa o pasiva.

1. Over 500 more crystal growth studies have been conducted since then, assisting with drug development on Earth.
2. More than 250 CubeSats have been deployed, accelerating the growth of the small satellite industry and expanding low-Earth orbit research.
3. More than 1,000 flames have been created during the ACME experiments.
4. Astronauts have grown 8 different types of leafy greens in the Veggie facility aboard the station for the astronauts to eat.
5. Over 3,000 experiments have been conducted on station by more than 4,000 researchers from more than 100 countries.
6. More than 150 billion particles have been measured by the Alpha Magnetic Spectrometer-02, assisting with the search for dark matter.
7. More than 950,000 students around the world have taken part in the Sally Ride EarthKAM program since it began in 2001.

8. The program has captured more than 200,000 images of Earth from the space station.
9. Over 8,000 U.S. schools have taken part in the EarthKAM Mission, along with more than 4,000 international schools.

UNIDAD 7: Oraciones condicionales

Las **oraciones condicionales** se utilizan para hablar de situaciones reales o irreales en las que una acción depende de otra. Hay 4 tipos de oraciones condicionales y el uso de uno u otro refleja la probabilidad de la acción.

IF IT
WAS EASY,
EVERYONE
WOULD
DO IT.

Condicionales: tipos 0 y 1

Lee las siguientes oraciones y responde las preguntas:

CONDICIÓN	+	RESULTADO
A If you heat water at 100 °C,		it boils .
B If Susan eats strawberries,		she gets an allergy.

- 1) ¿La condición es posible o no?
- 2) ¿Siempre se obtiene el mismo resultado?

Las oraciones **A** y **B** son ejemplos de **condicional tipo 0** (*zero conditional*).

CONDICIÓN	+	RESULTADO
C If we don't reduce carbon emissions,		the Earth will become much warmer.
D If we waste natural resources,		we won't preserve the environment.

- 1) ¿La condición es posible o no?
- 2) ¿El resultado se produce ahora o en el futuro?

Por su parte, las oraciones **C** y **D** son ejemplos de **condicional tipo 1** (*first conditional*).

Las **oraciones condicionales** se componen de 2 partes:

- ✚ una **cláusula con if** (*if clause*) que indica **la condición**
- ✚ una **cláusula principal** (*main clause*) que indica **el resultado**

Si la **cláusula con if** (condición) se menciona **primero**, se separa de la **cláusula principal** (resultado) con una **coma**. Si se menciona en el **orden inverso**, **no se usa coma**.

- **If I don't practice the piano everyday**, I play poorly.
- I play poorly **if I don't practice the piano everyday**.
- **If you hurry**, you'll catch the bus.
- You'll catch the bus **if you hurry**.

ZERO CONDITIONAL

Se refiere a una **situación que es siempre verdadera** (verdades universales, hechos científicos o de nuestra vida cotidiana).

IF CLAUSE (condición)	MAIN CLAUSE (resultado)
If + Presente Simple	Presente Simple
If you freeze water,	it turns into ice.

Ejemplos:

- ✚ If you add two and two, you get four.
- ✚ If you put oil on water, it floats.
- ✚ I get tired if I work too much.

FIRST CONDITIONAL

Se emplea cuando una **situación es real o posible**.

IF CLAUSE (condición)	MAIN CLAUSE (resultado)
If + Presente Simple	Futuro Simple
If we change our habits,	we will save our planet.
If + Presente Simple	modal + verbo principal
If it is cold,	you must wear warm clothes.
If + Presente Simple	Imperativo
If the book is interesting,	buy it.

Ejemplos:

- ✚ If he is busy now, I will come back tomorrow.
- ✚ If he calls you, you should go.
- ✚ You won't pass the course if you don't study.

Otras palabras para expresar condiciones

WHEN (cuando) - Para describir algo que **seguramente sucede o sucederá**.

- ✚ Alcohol evaporates **when** you expose it to air.
- ✚ **When** I finish the report, my boss will be satisfied.

AS SOON AS (tan pronto como) - Para decir que algo ocurrirá **inmediatamente después de otro evento**.

✚ I'll buy an electric car **as soon as** I save enough money.

UNTIL (hasta) - Para decir que algo **sucederá o no hasta un punto en particular**.

✚ Air quality won't get better **until** we plant more trees.

UNLESS (a menos que) - Para describir **un resultado si algo no ocurre**.

✚ The ice caps will melt **unless** we stop global warming.

AS LONG AS / PROVIDED / PROVIDING (THAT) (siempre y cuando)

✚ You can go to Spain **provided** you get good marks at school.

✚ I'll help you with Biology **as long as** you help me with English.

Actividad 1

Clasificá las siguientes oraciones condicionales en Tipo 0 o Tipo 1.

- 1) If we don't protect polar bears, they will become extinct.
- 2) If I use a reusable bag, will it help the environment?
- 3) If two tectonic plates move in different directions, they build up energy at the fault line.
- 4) If you travel abroad, remember your passport.
- 5) Plants die if they don't get enough water.
- 6) When technology improves, we will use more renewable energy.
- 7) If they get to an agreement, they will not have to go to trial.
- 8) If you mix red and blue, you get purple.
- 9) If you don't know a word, you can look it up in my dictionary.
- 10) An ice cube melts when you put it in the sun.

Texto 1

HOW POACHERS BECAME CARETAKERS

When John Kasaona was a boy growing up in Namibia, his father took him into the bush to teach him how to take care of the family's livestock. His father said, "If you see a cheetah eating our goat, walk up to it and smack it on the backside." A cheetah is a very nervous animal. If a person confronts it, it will probably run away. John also learned how to deal with a lion by standing very still and making himself look very big. These were useful lessons for a boy who became a wildlife conservationist. As Kasaona says, "it is very important if you are in the field to know what to confront and what to run from."

Kasaona was born in 1971. At that time, Namibia had many problems. The country was at war from 1966 to 1990. Because of the fighting, many people had rifles. This caused a secondary problem—poaching. For example, poachers killed many black rhinos for their horns, which were very valuable. To make things even worse, around 1980, a terrible drought killed people, livestock, and wildlife. By 1995, there were only 20 lions left in the Kunene region in the northwest of the country, where Kasaona's family lives. Many other species were also endangered.

At the same time, positive changes were taking place. A non-governmental organization, the Integrated Rural Development and Nature Conservation (IRDNC) began working in Namibia to protect wildlife. **(1)** They met with village leaders to ask who would be able to work with them. They needed people who knew the bush well, and who understood how wild animals lived. **(2)** The answer was surprising: work with local poachers. It seemed crazy, but it also made sense. **(3)** So IRDNC hired a group of poachers, including Kasaona's own father, to help protect wildlife in Namibia.

Since then, the situation has changed dramatically. The Kunene region now has more than 130 lions. The black rhino, almost extinct in 1982, has come back and there are now many free-roaming black rhinos in Kunene. Most importantly, more land than ever is under conservation. That protected land generates money from tourism for Namibia to use in education, health care, and other important programs for its people.

John Kasaona explains, "We were successful in Namibia because we dreamed of a future that was much more than just a healthy wildlife." That success is now a model for other African countries.

"We knew conservation would fail if it didn't work to improve the lives of the local communities."

– John Kasaona

Fuente: National Geographic Learning (NGL.Cengage.com/ELT)

A. Leé el texto y respondé las preguntas:

- 1) What did John's father recommend him to take care of the livestock?
- 2) What will probably happen if you face a cheetah?
- 3) What is important to know when someone is in the field?
- 4) What were Namibia's problems at the time Kasaona was born?

5) This sentence was extracted from paragraph 3: "After all, if you spend your time hunting for animals, you will know where they live and how they behave". In what position should it go, 1, 2 or 3?

6) What were the results of the IRDNC work?

B. ¿Qué dice la frase del recuadro? ¿En qué tiempos están conjugados los verbos?

Para saber +

Video: TEDTalk: How poachers became caretakers

https://www.ted.com/talks/john_kasaona_how_poachers_became_caretakers

Condicionales: tipos 2 y 3

Leé las siguientes oraciones y respondé las preguntas:

	CONDICIÓN	+ RESULTADO
E	If we won the lottery,	we would travel round the world.
F	If I were (*) you,	I would get a new job.

(*) Se usa **were** en lugar de **was** con I, he/she/it para indicar subjuntivo.

- 1) En el ejemplo E, ¿la condición es muy probable o poco probable?
- 2) En el ejemplo F, ¿la condición es posible o imposible?
- 3) En ambos casos, ¿el resultado es verdadero o hipotético?

Las oraciones **E** y **F** son ejemplos de **condicional tipo 2 (second conditional)**.

	CONDICIÓN	+ RESULTADO
G	If I hadn't eaten so much,	I wouldn't have felt sick.
H	If they had taken a taxi,	they would have arrived on time.

- 1) ¿La condición ocurrió o no?
- 2) ¿El resultado es real o imaginario?

Las oraciones **G** y **H** son ejemplos de **condicional tipo 3 (third conditional)**.

SECOND CONDITIONAL

Se refiere a una **situación poco probable en el futuro** (ej. algo imaginario, algún deseo o sueño) o **imposible en el presente** (porque no es verdad).

IF CLAUSE (condición)	MAIN CLAUSE (resultado)
If + Pasado Simple	Condicional Simple
If they spoke Spanish,	we would understand them.

Ejemplos:

- ✚ If she wrote a book, it would be a bestseller.
- ✚ If I had enough money, I would buy a new car.
- ✚ I'd do this homework quicker if I had a calculator.

THIRD CONDITIONAL

Se refiere a una **situación hipotética del pasado** y su **resultado** es **imaginario**.

IF CLAUSE (condición)	MAIN CLAUSE (resultado)
If + Pasado Perfecto	Condicional Perfecto
If it hadn't rained ,	we would have gone to the park.

Ejemplos:

- ✚ If you had studied harder, you would have passed the exam.
- ✚ I would have bought you a present if I'd known it was your birthday.
- ✚ If she had gone to art school, she would've become a painter.

Tanto **WOULD** como **HAD** pueden contraerse de la misma forma, **-'d**, algo que puede generar confusión si no dominamos las oraciones condicionales de tipo 3.

- Si aparece en la **cláusula con if**, **-'d** es la contracción de **HAD**.
- Y si está en la **cláusula principal**, es la contracción de **WOULD**.

Ejemplos:

- ✚ I would have gone if he had invited me.
- ✚ **I'd have gone** if he'd invited me.
- ✚ **I would've gone** if he'd invited me.

En síntesis

	CONDICIÓN	RESULTADO
Zero Conditional	If + Presente Simple	Presente Simple
situación siempre verdadera	If you touch fire,	you get burned.
First Conditional	If + Presente Simple	Futuro Simple/modal /Imperativo
situación real o posible	If the weather is nice,	we will go on a picnic.
Second Conditional	If + Pasado Simple	Condicional Simple
situación hipotética o improbable	If you gave up smoking,	you would feel much better.
Third Conditional	If + Pasado Perfecto	Condicional Perfecto
situación hipotética del pasado	If I had seen Jane,	I would have given her the message.

Actividad 2

Clasificá las siguientes oraciones condicionales en Tipo 2 o Tipo 3.

- 1) She wouldn't have been so tired if she had gone to bed earlier.
- 2) If someone stole my car, I would report it to the police immediately.
- 3) I would make you a cake for your birthday if I cooked better.
- 4) If there hadn't been a recession, the company would have survived.
- 5) Michael would be angry if you took his computer without permission.
- 6) Would you have accepted the offer if we'd reduced the price?
- 7) What would you do if you found a wallet on the street?
- 8) If we'd looked at the sky, we would've seen the shooting star.
- 9) If my father was here, he would help us with the homework.
- 10) He wouldn't have missed the bus if he hadn't overslept.

Texto 2

Mystery of the Red Truck

By Sally Nicholls, a local reporter

It has been confirmed that late on the night of the sixth of July, a large red truck ran into the bakery on Maryland Street. After an initial investigation by police, it is now clear that the truck had no driver at all. The locals are asking a simple question: "Where was the driver?" If the police want to solve this mystery, they will need the CCTV footage from the street. One of the locals said: "We're all quite worried about a truck with no driver. This truck has never been seen in the neighbourhood before. If we'd seen that truck before, we'd have solved this mystery by now." Many locals share the same concerns. They want to know what's happening in their town.

A witness at the crime scene told police: "There was a loud noise coming from the truck while it was going towards the building and its speed.... it was unbelievable. If it had been going slower, I would've had a chance to see the driver." But all I saw was the truck speeding into the bakery as fast as it could."

The police have already spoken with eleven other residents but no one knows any further details about the incident. Superintendent Amanda Slippers remarked: "This is a tough case. The truck licence plate belongs to this town, but nobody has seen it here. According to the town records, the owner of the truck moved away from here years ago. No one knows where to. If we can locate the owner, we'll probably solve this mystery."

If a truck moves, then it has a driver. Well, maybe we should change this basic assumption on account of this mysterious red truck.

Fuente: <https://www.photocopiables.com/>

A. Léé el texto y decidí si las siguientes afirmaciones son verdaderas (V) o falsas (F):

- 1) The locals knew that the red truck had an old driver.
- 2) The police have investigated all the people in the town.
- 3) The CCTV footage of the street will help the police.
- 4) The locals hadn't seen the truck in the town before.
- 5) The truck ran into the building very slowly.

B. ¿A qué tipo de condicional corresponden las oraciones subrayadas en el texto?

Texto 1

SOURCES OF RENEWABLE ENERGY

Whether or not our conventional sources of energy are running low is a matter of controversy. In any case, for a number of reasons there has been an increase in research into renewable forms of energy in recent years. In this section, we are going to take a closer look at two of these: hydro and tidal energy.

A comparison of hydro-electric and tidal power

In addition to the established energy sources such as gas, coal, oil and nuclear, there are a number of other sources that we ought to consider. Two of these are hydro-electric and tidal power.

These two sources are similar, in that they are both renewable. However, hydro-power is more widely used than tidal. In fact, a substantial amount of electricity is already produced in HEP stations world-wide, whereas tidal stations are still in the very early stages of development.

As far as geographical location is concerned, HEP schemes are to be found on lakes and rivers, while tidal schemes are constructed only in estuaries where tidal variation is great. Unfortunately, these are few, in number. At present, HEP stations are found mainly in Norway, Canada, Sweden and Brazil, whereas tidal plants are in operation in France, Russia and China.

As regards capital outlay, both require very high investment. On the other hand, generating costs are quite low in both cases. In fact, a large-scale HEP plant is capable of producing power more cheaply than conventional sources, such as coal, oil and nuclear plants. Tidal power also compares favourably with nuclear and oil generated electricity, in terms of production costs. Like HEP stations, tidal barrages have a long life-expectancy. It is estimated that they can operate for over 100 years. With respect to continuity of supply, tidal stations differ from HEP schemes in that they often can only supply power intermittently. HEP stations, however, provide a constant supply of electricity.

Turning now to environmental impact, tidal plants do not seem to create too many problems. In contrast, HEP stations often involve the flooding of large amounts of agricultural land, the destruction of ecological habitats, and may even cause a change in the climate of the area.

Both tidal power and HEP have one big disadvantage, in that if the demand for power exists at any distance from the generating plant, transmitting the electricity is expensive.

Texto 2

HAZARDS FROM NUCLEAR POWER

_____ Second, there is the problem of waste. All nuclear power stations produce wastes that in most cases will remain radioactive for thousands of years. It is impossible to make these wastes nonradioactive, and so, they must be stored in one of the inconvenient ways that scientists have invented. (1)....., they may be buried under the ground, or dropped into abandoned mines, or sunk in the sea. However, these methods do not solve the problem, since an earthquake could easily crack the containers open.

_____ Nuclear power is the controlled use of nuclear reactions to release energy for work including propulsion, heat, and the generation of electricity. As of 2004, nuclear power provides 6.5% of the world's energy and 15.7% of the world's electricity. There are three separate sources of hazard in the process of supplying energy by nuclear power:

_____ Critics, including most major environmental groups, consider that nuclear power is an uneconomic and potentially dangerous energy source with a limited fuel supply, especially compared to renewable energy, and dispute that the costs and risks can be reduced through new technology. Proponents, (2), claim that these risks are small and can be further reduced by the technology in the new reactors. They (3) claim that the safety record is already good when compared to the other major kinds of power plants, that many renewables have not solved the problem with their intermittent power production, in effect limiting them to a minority share of power production, and that nuclear power is a sustainable energy source.

_____ First, the radioactive material must travel from its place of manufacture to the power station. (4)..... the power stations themselves are solidly built, the containers used for the transport of the materials are not. There are normally only two methods of transport available, namely road or rail. Unfortunately, both of these involve close contact with the general public, since the routes are sure to pass near or even through, heavily populated areas.

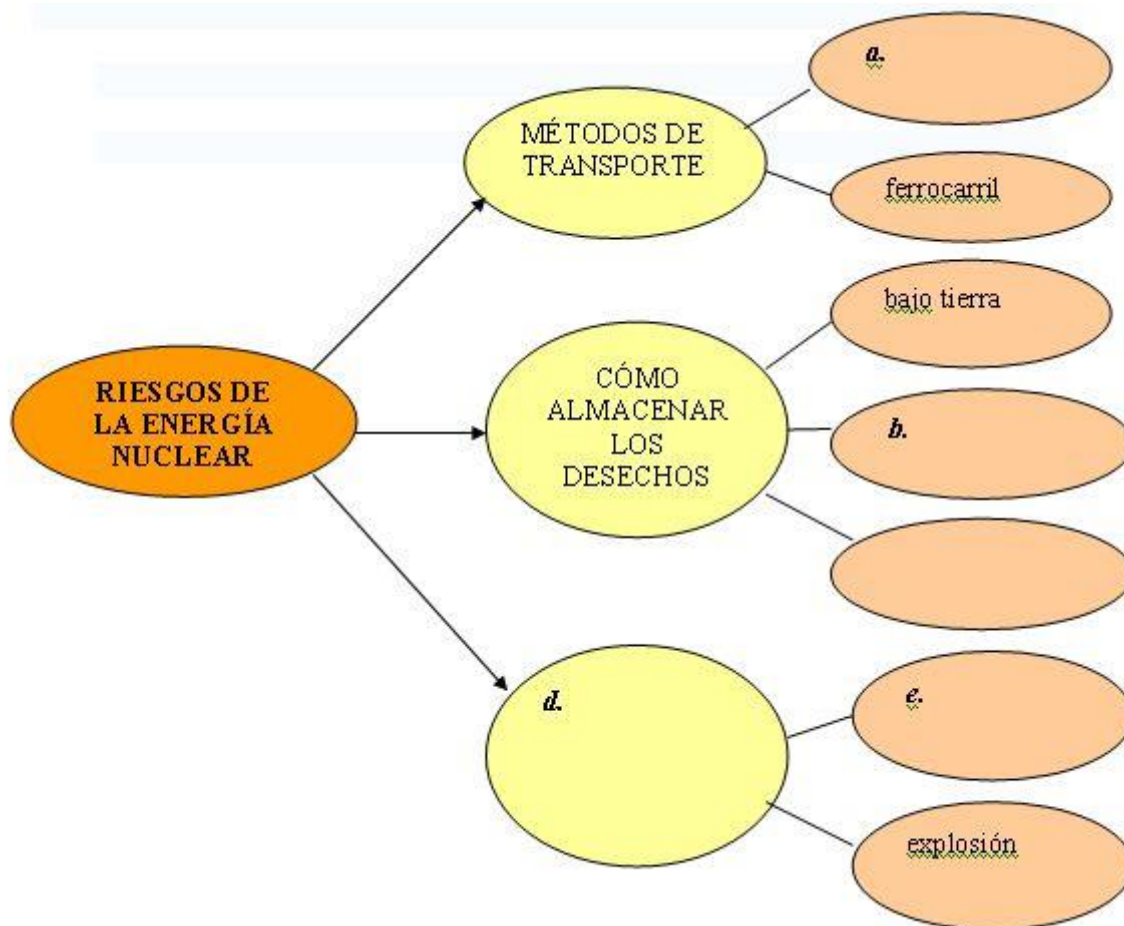

_____ (5), there is the problem of accidental exposure due to a leak or an explosion at the power station. As with the other two hazards, this is not very likely, so it does not provide a serious objection to the nuclear program. Nevertheless, it can happen.

Es antieconómica.	El riesgo es bajo y puede ser reducido mediante el uso de tecnología.

Patrones de organización de los textos

A fin de **comprender mejor y organizar** distintos elementos, el ser humano a lo largo de la historia ha ideado distintos **patrones**, como por ejemplo la organización del día en 24 horas y el año en 12 meses. Lo mismo ocurre con la mayoría de los **textos informativos**, el autor organiza la información que quiere comunicar de una forma que resulte clara y ordenada para el lector. Por supuesto que los textos literarios quedan excluidos de todo patrón.

Por ejemplo, el texto ***Sources of Renewable Energy*** presenta un patrón bien definido: una **comparación** de dos tipos de energía, la energía hidráulica y la energía mareomotriz. Esto nos sirve para plantear con mayor facilidad la idea principal del texto, es decir el mensaje que el autor quiere transmitir: Comparación de las dos formas de energía, con sus similitudes y diferencias, ventajas y desventajas.

Otro ejemplo es el texto ***Hazards from Nuclear Power***. Si observamos en detalle este texto, veremos que en este caso también se plantea una **comparación** de las ventajas y desventajas de la energía nuclear y, al mismo tiempo, se presenta un **listado** de los problemas de este tipo de energía.

Si observamos con atención, vamos a ver que a lo largo de los textos se presentan **señales** (palabras y frases) que están marcando un patrón determinado. Por ejemplo, en el texto ***Sources of Renewable Energy*** ya desde el subtítulo se vislumbra la intención del autor: ***A comparison of hydro-electric and tidal power*** y después, ya dentro del texto aparecen palabras y frases como: ***similar, both, however, more widely used than..., whereas, as far as ... is concerned, while, as regards, on the other hand, also compares, like, differ from, in contrast, disadvantage, etc.***

A este tipo de palabras, frases y estructuras las llamamos **señales de comparación y/o contraste** (este texto en particular presenta tanto diferencias como similitudes, pero otro texto podría presentar solo diferencias o solo similitudes).

En el segundo texto, ***Hazards from Nuclear Power***, el autor utiliza dos patrones para expresar sus ideas. Por un lado, enuncia las ventajas y desventajas que presenta este tipo de energía (**comparación**) que están marcadas con **señales** como estas: ***however, problem, compared to, on the other hand, nevertheless, although, etc.***

Y por otro organiza el texto como un listado de los problemas o peligros que presenta la energía nuclear y utiliza **señales** como estas: ***There are three separate sources of hazard, first, second, finally, etc.***

Vemos con este último ejemplo, que no siempre hay un solo patrón en un texto, sino que puede haber varios patrones combinados en igual medida, o que alguno predomine sobre el otro.

Pero estos son solo dos de los patrones que existen. A continuación, vamos a analizar los patrones que se usan con más alta frecuencia:

Clasificación de los patrones de organización de los textos

1. Comparación y/o contraste (diferencias y similitudes)
2. Listado de ideas relacionadas o ejemplos
3. Definición
4. Secuencia cronológica
5. Secuencia de pasos en un proceso
6. Causa-efecto

1. Comparación y/o contraste (diferencias y similitudes)

The progress of science is usually believed to have improved the quality of many processes, products, and services. However, in certain spheres of life, traditional methods are still being used; medicine is a bright example of the co-existence of **two antipodal approaches**. Along with commonly recognized conventional medicine based on science and technology, there also exists alternative medicine, which sometimes includes practices developed thousands of years ago. The **superiority** of each of these kinds of medicine have a long-standing history, as each of them have proved its effectiveness; therefore, understanding their **advantages** and **drawbacks** is crucial for forming one's own point of view. **The first difference** between these two systems is their approach to diagnosis. Conventional medicine focuses on the factors that cause diseases and remedying their symptoms; every abnormality is seen as an independent clause, separate from the personality of an individual and their environment. **Unlike its counterpart**, alternative medicine sees a body as an equilibrium of interrelations between a body and its environment; therefore, a disease is thought to be caused by an imbalance between them. In other words, alternative medicine focuses rather on cleansing the entire system than on curing its particular elements.

Este texto trata sobre las diferencias entre la medicina tradicional y la medicina alternativa. ¿Cuáles son?

Medicina tradicional	Medicina alternativa

2. Listado de ideas relacionadas o ejemplos

For the second year in a row, New York has been declared the smartest city in the world, according to the IESE Cities in Motion Index. London and Paris also maintain their positions just behind the big apple, taking **the second and third spots** respectively. **The top-10 list** is completed by Tokyo (4), Reykjavik (5), Singapore (6), Seoul (7), Toronto (8), Hong Kong (9) and Amsterdam (10.) Europe, with 12 cities ranking among the top 25, is once again the **top-performing** geographical area. It is **followed by** North America, with six; Asia, with four (all in the top 10); and Oceania, with three.

En este párrafo se presenta el ranking de ciudades inteligentes en el mundo. ¿Cuáles son las 10 ciudades más inteligentes?

3. Definición

The Internet of Things (IoT) is the network of physical devices, vehicles, home appliances, and other items embedded with electronics, software, sensors, actuators, and connectivity which enables these things to connect and exchange data, creating opportunities for more direct integration of the physical world into computer-based systems, resulting in efficiency improvements, economic benefits, and reduced human exertions.

En este párrafo se define la Internet de las Cosas. ¿Qué es?

.....

.....

4. Secuencia cronológica

Founded **after World War II** by 51 "peace-loving states" combined to oppose future aggression, the United Nations now counts 192 member nations, including its newest members, Nauru, Kiribati, and Tonga **in 1999**, Tuvalu and Yugoslavia **in 2000**, Switzerland and East Timor **in 2002**, and Montenegro **in 2006**.

United Nations Day has been observed **on October 24 since 1948** and celebrates the objectives and accomplishments of the organization, which was established **on October 24, 1945**. The UN engages in peacekeeping and humanitarian missions across the globe.

El propósito de este párrafo es contar brevemente la historia de las Naciones Unidas. Las señales ayudan a destacar los hechos importantes. ¿Cuáles son esos hechos? ¿Cuándo ocurrieron? Indicar el hecho ocurrido en cada una de las siguientes fechas:

Después de la Segunda Guerra Mundial:

.....

En 1999:

En 2000:

En 2002:

En 2006:

El 24 de octubre de 1948:

El 24 de octubre de 1945:

5. Secuencia de pasos en un proceso

First, discuss with the customer their requirements and the target audience. Find out what features and number of pages they want on their website. **Secondly**, analyse the information from the customer. **Thirdly**, create a website specification. **Next**, design and develop the website. **After that**, assign a specialist to write the website content. **Then**, give the project to programmers for HTML coding. **Finally**, test the website. **After you publish your website**, update and maintain it on an ongoing basis. Monitor customer use.

El propósito de este párrafo es describir los pasos a seguir para desarrollar una página web. El orden en que se realiza cada paso es importante para lograr buenos resultados y esta es la diferencia esencial entre un listado y una secuencia. ¿Podés enumerar brevemente los pasos de este proceso?

Primero,

Segundo,

Tercero,

A continuación,

Después,

Luego,

Finalmente,

6. Causa – efecto

About 800,000 people have been displaced and more than 350 have died in the worst flooding in a century in southern India's Kerala state, according to officials.

Downpours that started on August 8 **have triggered** floods and landslides and **caused** homes and bridges to collapse

across Kerala, a picturesque state known for its quiet tropical backwaters and beautiful beaches. Authorities are rushing to bring drinking water to the most affected areas. At least two trains carrying about 1.5 million litres of water were moving to the flooded areas from the neighbouring states of Madhya Pradesh and Maharashtra, Indian railway official Milind Deouskar said, according to the Press Trust of India news agency.

El objetivo de este párrafo es presentar los daños causados por la peor inundación del siglo en la India. ¿Cuál fue la causa o el origen de estos problemas? ¿Cuáles fueron algunos de los problemas o consecuencias sufridos?

Causa:

.....

Problemas:

.....

.....

.....

SEÑALES

Completá la tabla con las palabras y frases típicas de cada patrón que vayas encontrando en los textos.

PATRÓN	PALABRAS/FRASES SEÑALES
Comparación y/o contraste	like
Listado de ideas relacionadas/ejemplos	There is/are...
Definición	is/are
Secuencia cronológica	in 1998
Secuencia de pasos en un proceso	first
Causa-efecto	because

Actividad 1

Elegí el patrón que se presenta en cada oración.

1. A growing body of scientific research reveals that alcohol use by pregnant women can result in birth defects in unborn children.
a. comparación b. contraste c. secuencia cronológica d. causa y efecto
2. Alcohol abuse is similar to drug abuse in several ways.
a. comparación b. contraste c. definición d. causa y efecto
3. There are four types of therapeutic approaches to mental disorders: insight-oriented therapy, behavior therapy, group therapy, and biological therapy.
a. comparación b. contraste c. listado d. causa y efecto
4. Semiconductors are sample devices that use materials that are halfway between the conductors' characteristic of few outermost shell electrons and the table, inert materials with eight valence electrons.
a. comparación b. definición c. secuencia d. listado
5. *Polarity* denotes the relative electrical charge of one point in an electrical circuit "with reference to" another point.
a. listado b. secuencia de pasos c. definición d. comparación

Ideas principales (1)

Los párrafos son encadenamientos de ideas del que escribe. Algunas de estas ideas son esenciales para entender el mensaje del autor y se las llama **ideas principales**. Otras no lo son tanto y se las denomina **ideas secundarias**. Su función es apoyar la idea principal, dar ejemplos, ampliarla o restringirla.

Para poder identificar cuál es la idea principal de un párrafo, hay que preguntarse: ¿De qué, sobre qué o quién habla? ¿Qué idea relaciona todas las partes del texto? Algunas veces, esta idea está expresada **en la primera o en la última oración** del párrafo. Otras veces, está expresada por **más de una oración** y otras, está **implícita**, por ejemplo, en un poema.

Ejemplo:

(1) In some industrialized countries, people are retiring from work at an early age. (2) This is especially true in Europe, where many workers retire at age 55. **(3)** In 1970, about half the men aged 55 continued to work. **(4)** Now, only about 10-30% of that age group continue to work. **(5)** The reason for this trend is economic. **(6)** Some European governments wanted people to retire early so that their jobs could go to younger people. **(7)** But early retirement has created new economic problems. **(8)** Governments are having trouble paying the pensions and health costs for all the additional retired people.

En este ejemplo, la idea principal está expresada en la **primera oración**. Las demás oraciones amplían y dan ejemplos acerca de lo dicho en la primera.

Actividad 2

Marcá la oración que expresa la idea principal de cada párrafo.

A **(1)** Fossils are the remains of ancient plants and animals. **(2)** Scientists called paleontologists learn many things by studying fossils. **(3)** Paleontologists study fossils to learn about Earth's early history and how animal life began. **(4)** They think the first animals were worms and shellfish. **(5)** Over time, many of these adapted, or changed, to become fish, amphibians, insects, reptiles, birds, or mammals.

B **(1)** Of all the inventions that had an impact on the Chinese culture during Medieval times, the most important was printing. **(2)** Before there was printing, all books were copied by hand. **(3)** Books were therefore rare and expensive. **(4)** The Chinese began printing in the A.D. 500s. **(5)** They carved characters from an entire page on blocks of wood. **(6)** They then brushed ink over a wooden page and then laid a piece of paper over the block to make a print. **(7)** In 1045, a Chinese printer invented printing using moveable type; the books that were made using this process helped spread knowledge throughout China, to a degree that had not been possible before.

C **(1)** There are few challenges as important as conserving the world's usable water and supplying clean drinking water and water for irrigation to those who need it. **(2)** Yet this work is not getting done. **(3)** Humans are depleting the earth's store of usable water at a rate that will soon threaten our food supply. **(4)** Poor water management already kills millions of people a year and condemns hundreds of millions to hunger. **(5)** Undoubtedly, the most precious fluid on earth is not oil, but water.

D (1) During World War I, a number of severe shortages alerted the world's scientists to the need for synthetic or man-made materials. (2) Thus, by 1934, a research team headed by Wallace H. Carothers had developed the first synthetic fiber, called nylon. (3) As it turned out, the development of nylon had a surprisingly profound effect on world affairs. (4) True, it was first used in fashion, and in 1939, the Dupont company began marketing sheer nylon hose for women. (5) Nylons were a spectacular hit and sold off the shelves almost immediately. (6) But they disappeared with the coming of World War II, as nylon became essential to the war effort. (7) It was used in everything from parachutes and ropes, to insulation and coat linings. (8) Sadly, Carothers never witnessed the impact of his creation. (9) He committed suicide two years before the first pair of nylons ever went on sale.

E (1) Africa was one of the sites where agriculture began. (2) Archaeological investigations suggest that knowledge of cultivation moved west from ancient Judaea (southern Palestine) and arrived in the Nile Delta in Egypt about the fifth millennium before Christ. (3) Settled agriculture then traveled down the Nile Valley and moved west across the southern edge of the Sahara to the central and western Sudan. (4) By the first century B.C., settled agriculture existed in West Africa. (5) From there it spread to the equatorial forests. (6) African farmers learned to domesticate plants, including millet, sorghum, and yams. (7) Cereal-growing people probably taught forest people to plant regular fields. (8) Gradually African farmers also learned to clear land by burning. (9) They evolved a sedentary way of life--living in villages, clearing fields, relying on root crops, and fishing.

F (1) In a recent study, researchers interviewed 1,500 business managers in The United States. (2) They asked all kinds of questions about the managers' habits and opinions regarding their work. (3) The researchers learned that only 33% of the managers worked 40-45 hours. (4) The majority of them (57%) worked from 46-60 hours a week and 6% worked over 60 hours. (5) Only 2% of the managers said they felt satisfied and had time to do everything. (6) The rest of the managers felt they did not have enough time for their families and hobbies. (7) The study showed that American managers are generally not happy with their working schedules.

Ideas principales (2)

La **idea principal** de un párrafo también puede estar expresada en **más de una oración**.

Ejemplo:

By the time the first European travelers on the American continent began to record some of their observations about Indians, the Cherokee people had developed an advanced culture that probable was exceeded only by the civilized tribes of the Southwest: Mayan and Aztec groups. The social structure of the Cherokee people consisted of a form of clan kinship in which there were seven recognized clans. All members of a clan were considered blood brothers and sisters and were bound by honor to defend any member of that clan from wrong. Each clan, the Bird, Paint, Deer, Wolf, Blue, Long Hair and Wild Potato was represented in the civil council by a councillor or councillors. The chief of the tribe was selected from one of these clans and did not inherit his office

from his kinsmen. Actually, there were two chiefs, a Peace chief and a War chief. The Peace chief served when the tribe was at peace, but the minute war was declared, the War chief was in command.

¿Cuál es la idea principal de este párrafo?

- a. The Cherokee chief was different in war time than in peace time.
- b. **Before the arrival of the Europeans, the Cherokees had developed a well-organized society.**
- c. The Mayans and the Aztecs were part of the Cherokee tribe.
- d. Several Indian cultures had developed advanced civilizations before Europeans arrived.

Idea principal en español: La tribu de los cheroqui ya contaba con una sociedad bien organizada antes de que llegaran los europeos.

Actividad 3

1) The first invention of the human beings was the wheel. Although no wheel forms are found in nature, undoubtedly the earliest “wheels” were smooth legs which were used for moving weights over the earth’s surface. No one recorded who he or she was or when it happened, but when the “first inventor” placed a wheel on an axle, people began to roll from one place to another. Records of this type of wheel have been found among Egyptians relics dating back to 2,000 B.C. and earlier Chinese civilizations are credited with independent invention of the same mechanism. The wheel so fascinated the human mind that people have spent centuries building machines around it; yet in over 4,000 years its basic design has remained unchanged. All about us we see the spinning shafts, gears, flywheels, pulleys and rotors which are the descendants of the first wheel. The roaring propeller of an aircraft engine, the whirling wheel of a giant steam turbine, and the hairspring of a tiny watch are examples of the rotary motion which characterizes our mechanical world. It is hard to conceive of continuous motion without the wheel.

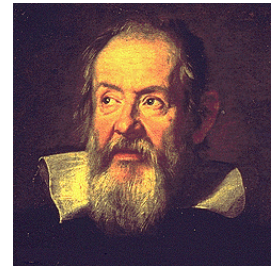

¿Cuál es la idea principal de este párrafo?

- a. The wheel is used today in industry and transportation.
- b. One of human being’s first inventions, the wheel, has remained important for 4,000 years.
- c. The basic design of the wheel has been changed to meet the needs of the industrial society.
- d. Although we don’t know exactly who invented the wheel, it is evident that the Egyptians and Chinese used it about 4,000 years ago.

Idea principal en español:

2) An aggressive publicist of the Scientific Revolution and one of its greatest contributors was a Florentine, Galileo Galilei. Both Copernicus and Kepler had worked with the naked eye. Galileo, informed of a new optical instrument developed in the Netherlands, the telescope, constructed one for himself and turned it toward the heavens. Through the lens of the fantastic instrument he was the first human being to see that Jupiter had moons like the Earth's, and that the earth's own moon was made of material similar to that found on earth. The momentous conclusion was that heavenly bodies were not made of more perfect material. Rather, they resembled the earth and were governed by the same laws. Galileo's conclusions were equally revolutionary when he turned to consider the behavior of bodies in motion. Traditional theories of dynamics, geared to the assumption that the natural state of a body was at rest, attempted to explain what caused motion to occur. For Galileo, there was no "natural" motion of the body; rather, if a body was in motion, it would continue in a straight line at the same speed forever unless deflected, quickened, or retarded by another force--illustrating the principle of inertia. Thus what concerned Galileo was not why things move but why changes in motion occur and how one describes these changes mathematically.

Fuente: Witt, et al., *The Humanities*, Vol. 2, fifth edition, p. 131

¿Cuál es la idea principal de este párrafo?

- a. Galileo built on the work of Copernicus and Kepler.
- b. Galileo built his own telescope to study heavenly bodies.
- c. Galileo was an important Renaissance scientist because he made revolutionary discoveries.
- d. Galileo discovered that Jupiter had moons.

Idea principal en español:

3) The North, South, and West followed distinct economic paths between 1800 and 1860. Everywhere, agriculture remained the foundation of the American economy. Nevertheless, the North increasingly invested its resources in industry, commerce, and finance; the South in plantations and subsistence farms; and the West in commercialized family farms, agricultural processing, and implement manufacturing. The tendency toward regional specialization made the various sections of the country at once less alike and more interdependent. All looked to transportation to link the various sections' economic activities.

The revolution in transportation and communications was probably the single overriding cause of these changes. Heavy investment in canals and railroads made the North the center of American commerce; its growing seaboard cities distributed western produce and New England textiles. New York financial and commercial houses linked the southern cotton-exporting economy to the North and Europe. The South, with most of its capital invested in slave labor, built fewer canals, railroads, and factories and remained mostly rural and undeveloped.

Fuente: Norton et al., *A People and a Nation*, fifth edition, Vol. 1, pp. 254-255

¿Cuál es la idea principal de este párrafo?

- a. Transportation developed in the North of the United States.
- b. Between 1800 and 1860, American economy was based on agriculture.
- c. American economy developed rapidly during the nineteenth century.
- d. Technological change had a profound effect during the nineteenth century.

Idea principal en español:

4) The unprecedented expansion of Modern architecture throughout the world must be considered one of the great events in the history of art. Within the space of the last generation, the contemporary movement has become the dominant style of serious building not only in the United States and Europe, where pioneers had been at work since the last nineteenth century, but also in nations such as Brazil and India, where almost no Modern architecture existed until much later. Only the Gothic perhaps, among all the styles of the past, gained popular acceptance with anything like the speed of the Modern. And like the Gothic – which required a full seventy-five years of experimentation before it produced the cathedral of Chartres- the scale, and revised its aesthetics as it has attempted to meet the full range of people’s civilized needs.

¿Cuál es la idea principal de este párrafo?

- a. Gothic architecture gained popular acceptance faster than Modern architecture did.
- b. Modern architecture has not changed fast enough to meet the needs of civilization.
- c. The rapid growth and development of Modern architecture (as an art form) is nearly unequalled in the history of art.
- d. In order to endure, architectural styles must develop and improve to meet society’s needs.

Actividad 4

Indicá cuál es el patrón de organización, el tema y la idea principal de cada párrafo.

1. As you might already know, there is no direct intermixing of blood between a mother and her unborn child. However, some substances—especially drugs—can still have a powerful effect on the fetus. If, for example, the mother is addicted to morphine, heroin, or methadone, the baby may be born with the same addiction. For that matter, even high doses of aspirin appear to have some effect on the fetus. In at least one study, high doses of aspirin have been linked to lowered IQs in infants.

Patrón de organización: Causa-efecto

¿De qué se trata? Tema: Mezcla de sangre entre madre y bebé

¿Qué expresa sobre el tema? Idea principal: Si bien no hay mezcla directa entre la sangre de la madre y el bebé, algunas sustancias pueden tener algún efecto sobre el feto.

2. In one study, 93 percent of people who suffered from chronic muscle or bone pain lacked enough vitamin D. Another study done by Harvard University showed that vitamin D, which we get mainly from sunlight, fatty fish, orange juice, and breakfast cereals, prevents bone fractures better than calcium does. Vitamin D also reduces the risk of getting arthritis by one-third. Getting the proper amount of vitamin D lowers blood pressure and seems to slow the growth of cancer cells. Furthermore, adequate vitamin D reduces the risk of getting multiple sclerosis by 50 percent and schizophrenia by 90 percent. (Fuente: Jean Carper, "D, Definitely," *USA Weekend*, May 7-9, 2004, p. 4.)

Patrón de organización: Listado de ideas relacionadas/ejemplos

¿De qué se trata? Tema: Vitamina D

¿Qué expresa sobre el tema? Idea principal:

3. Before the U.S. Food and Drug Administration will approve a new drug, it must determine that the drug is both safe and effective. Therefore, every potential new treatment is tested on human volunteers in clinical trials that last, on average, for seven years. In the first phase of a clinical trial, twenty to eighty volunteers, some of whom may be healthy, test the drug to identify how it works. In the second phase, the drug is tested on anywhere from one hundred to three hundred people who suffer from the disease the drug is supposed to treat. During these clinical trials, researchers try to determine the drug's risks and side effects. If the second phase indicates that the drug will be effective, the third phase tests 1,000 to 3,000 people with the disease. The fourth and final phase occurs after the drug is actually on the market and available to the public. At this point, ongoing trials monitor the drug's long-term effects. They also study how different groups, such as the elderly, react to the drug.

4. The two types of rainforests in the world are tropical rainforests and temperate rainforests. Tropical rainforests are found close to the equator in 85 different countries, where temperatures stay above 80 degrees all year round. Temperate rainforests are found near coastal areas that are farther north or south of the equator, such as New Zealand, Chile, Scotland, and the Pacific coast of Canada and the United States. Both types of rainforest are very lush and wet. Both contain vegetation that is tall, dense, and extremely green. Each is also rich in plant and animal life. Tropical rainforests, however, are much warmer than temperate rainforests. They are also much older. Tropical rainforests are millions of years old. Temperate rainforests are less than 10,000 years old. Tropical rainforests also get more rain. While temperate rainforests get about 100 inches of rain per year, tropical rainforests get about 400 inches per year. The variety of life forms is also greater in the tropical rainforest. This may be the reason why tropical rainforests are home to at least half-and maybe as much as 90 percent-of Earth's plant and animal species.
